Qubik AI & Automation: First 30 Days and Go-to-Market

Prepared for: Qubik Accounting

Prepared by: Vinaygopal Mawandia · ⟦DATE⟧

Scope:

- **Primary segment:** mid-market Australian businesses turning over A$3–10M; Meta first, with Google and LinkedIn as tests.

- **Second segment:** trades, mostly on Meta.

- **Optional:** AEO and outbound.

Figures marked "estimate" are planning assumptions, replaced by real data from week 2. Everything else is my recommendation.

Days 1–30: deliverables, owners, dependencies and thresholds

The first 30 days build the assets and accounts that every campaign after them depends on, then run a controlled Meta test. Google and LinkedIn come in as small tests only once tracking is proven.

Owners:

- **Me:** marketing strategy, copy, creative direction, campaigns, reporting.
- **Dominic:** sign-off and on-camera.
- **Qubik web/IT:** WordPress access and backups (I build the landing pages).
- **Automation specialist:** CRM and integrations, sample report and dashboard.
- **Sales:** calls and lead feedback.

Days 1–7: foundations and messaging

Deliverable	Owner	Depends on
Meta set up under Qubik's own Business Portfolio: AUD ad account on Brisbane time, Facebook Page and Instagram linked, Qubik's payment method, my access as partner	Me, Qubik IT	Admin access; Qubik owns every asset
Meta dataset (pixel) and domain verification for qubik.com.au	Me, Qubik web	DNS or WordPress access
Tracking on qubik.com.au (none exists today): Google Tag Manager added through Divi's built-in code box, carrying GA4, the Meta pixel and the Google tag; script delay in LiteSpeed switched off for these tags	Me, Qubik web	WordPress admin, a backup
Messaging guide: the buyer, three hooks (margin, capacity, visibility), proof points and a register of approved claims (e.g. Xero tier, prices)	Me (draft), Dominic (sign-off)	45-minute call with Dominic
Creative scripts and shoot plan: four phone videos with Dominic (three hooks, one 60-second explainer), plus static and carousel concepts	Me	Messaging guide
Landing page copy and wireframes: an automation diagnostic page, and a management dashboard page	Me	Messaging guide, prices confirmed
Lead form questions, CRM stages, SMS and email copy	Me (copy), automation specialist (CRM)	CRM choice
Privacy policy updated for ads, pixels and lead forms	Qubik	Qubik's privacy adviser

Gate before day 8: test events show up in Meta Events Manager and GA4, and the claims register is signed off.

Days 8–14: build and launch the Meta test

Deliverable	Owner	Depends on
Landing pages built in Divi: Blank Page template, hidden from the menu, noindex; a thank-you page with a booking calendar	Me	Copy signed off
Landing page form (Fluent Forms) with hidden fields for ad click IDs and UTMs; existing site forms untouched	Me	Plugin approval from Qubik
Creative produced: three hook videos (15–30 seconds, in 9:16 and 4:5), two statics, one carousel, captions	Me (edit), Dominic (30-minute shoot)	Scripts
Meta Instant Form (higher-intent type, five questions, privacy link)	Me	Privacy policy live
Meta campaigns built to the structure in section 1; prospecting test live with A$900 over 14 days	Me	All of the above
Funnel tested end to end with dummy leads: form → CRM → SMS and email → booking → handover to sales	Me, automation specialist	CRM live

Thresholds at A$450 spent (benchmarks are estimates):

Signal	Keep going	Change something	Stop
Leads	2+ leads, 1+ qualified	Leads arrive but don't qualify: tighten the callout and form	No leads: pause and replace the hooks
Video hold rate (people still watching after 3 seconds)	25%+	15–25%: rework the first 3 seconds	Under 15% on every hook: re-shoot
Link or form click-through	Around 1%+	0.5–1%: test a new headline or thumbnail	Under 0.5%: the angle isn't landing

Days 15–30: learn, extend, and test Google and LinkedIn

Deliverable	Owner	Depends on
Meta: switch off the weaker hooks, make two new versions of the winner, switch on retargeting	Me	Week 2 data
Google Search test live (see section 5), only after conversion tracking is verified	Me	Landing pages, tracking
LinkedIn test prepared and launched around day 21 (see section 5)	Me	LinkedIn Page access, budget agreed
Sales assets: a sample diagnostic report on dummy data, and a demo dashboard on sample data with a 60-second screen recording	Automation specialist (build), me (story)	Demo data
Trades creative and offer prepared for month 2 (see section 2)	Me	Day-21 review
Weekly reports (section 4) and a day-30 review with Dominic	Me	CRM data

Day-30 decision:

Measure	Scale	Fix and hold	Stop
Cost per qualified lead (Meta)	A$750 or less	A$750–1,000	Over A$1,000 after creative changes
Qualified meetings held (all sources)	5+	2–4	0–1
Diagnostics sold	1+	None, but proposals out	None, and no proposals

1. Mid-market (A$3–10M): hook and marketing strategy

Who. Owner-led Australian businesses turning over A$3–10M, with 10–50 staff, running Xero or a similar system plus spreadsheets. The lead vertical is **wholesale distributors that import**: the earlier analysis showed about 6,700 of them in this band (ABS), and Meta estimates 550–650k Australian owners and page admins with trade-related interests. Other mid-market firms with document-heavy back offices are a secondary audience on the same campaigns.

Two products, one entry point. Both are sold through the same fixed-fee diagnostic, so marketing runs one funnel:

1. **Automation:** supplier and freight invoices processed automatically, with container costs as the hook.
2. **Management dashboards:** "your numbers on Monday morning, not at month end". Cash, margin, stock and sales in one view, refreshed automatically from the systems they already use.

Hooks to test on Meta (one problem, three costs of it):

Hook	Line	Cost it speaks to
Margin	"Freight went up again. Did your prices?"	Money lost
Capacity	"Before you hire another person to chase supplier invoices…"	Hours and headcount
Visibility	"Do you know last week's margin, or will you find out at month end?"	Slow decisions; leads into dashboards

Meta account structure:

Campaign	Objective	Audience	Budget	Purpose
C1 Prospecting · Mid-market	Leads (Instant Form, higher intent)	Australia, 30–65, trade, wholesale and supply-chain interests plus small business owners and page admins, as signals (~550–650k); Qubik clients excluded	A$900 test, then scaled on results	Find and qualify new leads
C2 Retargeting	Leads, or website conversions to the landing page	People who watched 50%+ of a video, engaged with the Page or Instagram, or visited the landing page (last 30 days); existing leads excluded	~10–15% of spend	Second touch with the explainer video and the offer
C3 Prospecting · Trades (month 2)	Leads (Instant Form)	See section 2	Separate budget	Second segment, kept apart so it can't distort the mid-market data

Conventions:

- Campaign names follow Segment | Objective | Audience | Test.

- UTMs go on every ad.
- One ad set per campaign while volumes are small.
- Audience Network off.
- Lead outcomes (qualified, meeting held, sold) go back to Meta from the CRM once volume allows.

Instant Form or landing page. Meta's Instant Forms usually bring cheaper leads; landing pages usually bring better ones (an estimate to test). We start with Instant Forms for volume and data, then test a landing-page version once there's a baseline. Google and LinkedIn always go to the landing pages.

Marketing assets for this segment:

- two landing pages (automation diagnostic; management dashboard);
- four Dominic videos;
- statics and a carousel;
- a sample diagnostic report;
- a demo dashboard with a screen recording;
- a one-page sales PDF;
- lead form, SMS and email templates;
- an objection-handling sheet for sales;
- a case study template, ready for the first client.

2. Trades: the second target, mostly on Meta

Why Meta. Trade business owners are heavy Facebook users, and few search Google for "automation". The challenge is that only about 7% of trade businesses fall in the A$2–10M band (ABS), so the creative and form have to filter hard.

Angle. The gap between finishing a job and getting paid: quotes nobody follows up, jobs invoiced days late, and debtors chased by hand, across ServiceM8 or simPRO and Xero.

Example hooks: "How many quotes did you send last month that nobody followed up?" and "Jobs done Friday, invoiced Wednesday?"

Filtering: a form question on team size (10+ technicians), revenue, and field-service software used.

Timing: creative is built in weeks 3–4 and launched in month 2 as its own campaign (C3), so it doesn't muddy the mid-market test.

3. If 100 leads produced no paying clients

The stop rules should prevent it ever reaching 100. If it did, I'd find the stage where leads stall, because each stage has a different fix:

Where they stopped	Likely cause	What I'd do
Few qualified (under 20 of 100)	Wrong people: the hook or targeting attracts small businesses and browsers	Tighten the callout and form; replace the hook; check how many leads sat outside the revenue band
Qualified, but under half meet	Too slow, or no strong reason to meet	Measure response time; call within 5 minutes; make the call's payoff concrete ("your top three automation opportunities")
Meetings held, no diagnostic sold	Offer, price or proof	Listen to recorded calls; interview 5–10 people who didn't buy; test a lower-risk entry or stronger proof (sample report, demo dashboard)
Diagnostics sold, no build	The diagnostic doesn't make the business case	Review the reports: is the dollar figure big enough, and does the build price match it?

Each step is reviewed with Dominic using numbers. If the gap is still unexplained after the fixes, the segment isn't buying through this channel, and budget moves to whichever channel or segment is converting.

4. Weekly report

Every Monday, from the CRM, with a one-page note covering what worked, what didn't, and next week's changes.

Metric	Definition	Source
Spend	Ad spend by channel (Meta, Google, LinkedIn) and tools for the week, ex GST	Ad platforms, tool invoices
Leads	New contacts, by channel and campaign	CRM
Qualified leads	Passed the gates: right size, decision-maker, real need	CRM stage, confirmed by sales
Cost per qualified lead	Paid spend ÷ qualified leads from paid channels, per channel	Calculated
Meetings held	Discovery calls that actually took place (no-shows excluded), plus	Calendar, CRM

Metric	Definition	Source
	the show rate	
Proposals	Diagnostic and build proposals sent, with value	CRM
Paid clients	Signed and invoiced; diagnostics and builds counted separately	CRM, Xero
Collected revenue	Cash received this week	Xero
CAC	All acquisition costs ÷ new paying clients, shown weekly and as a running total	Calculated

Each lead keeps the channel it first came from. The report shows this week, last week and the running total, plus the funnel from leads to collected revenue for each channel.

5. Notes on the Google and LinkedIn tests

Google Search (a test from about day 15). This is a dedicated test for Qubik's mid-market offer. It is separate from any earlier keyword research, and none of those keywords or forecasts carry over.

- **Keyword themes:**
  - back-office automation for Xero users ("xero automation", "automate supplier invoices", "invoice processing automation", "accounts payable automation");
  - dashboards ("xero dashboard", "management reporting dashboard", "business dashboard for xero");
  - importers ("landed cost calculation", "landed cost xero");
  - Qubik's brand name, to protect it.
- **First step:** run these themes through Keyword Planner in Qubik's own AUD account to get volumes and bids. Volumes are likely to be small, so the test is about lead quality, not scale.
- **Setup:**
  - Search only, Australia, phrase and exact match;
  - negatives for software shoppers, jobs, courses and DIY;
  - ads send people to my matching landing page (automation or dashboard).
- **Budget:** A$600–1,200 over about four weeks (A$20–40 a day).
- **Stop if:** cost per qualified lead stays above A$1,000 after two rounds of search-term clean-up, or the themes show too little volume to learn from.
- **Before launch:** conversion tracking verified (the site has none today), and a Google Ads account owned by Qubik, in AUD on Brisbane time.

LinkedIn (a test from about day 21):

- **Audience:** owners, managing directors, finance managers and operations managers at Australian companies with 11–200 staff. LinkedIn can target by job title and company size, which Meta can't.
- **Format:** a Lead Gen Form with a document ad (the sample diagnostic report or the demo dashboard).
- **Budget:** A$1,000–2,000, fixed, over three to four weeks. LinkedIn clicks usually cost several times more than Meta's (estimate), so judge it on cost per qualified lead, not cost per lead.
- **Kill rule:** no qualified lead after the fixed budget is spent.

6. Optional: AEO and outbound

AEO (answer engine optimisation), long term. Buyers increasingly ask ChatGPT, Perplexity and Google's AI Overviews questions like "how do I automate invoice processing in Xero" or "what does an automation consultant cost". Qubik's Insights page is currently empty. Over three to six months:

- 10–15 pages that answer those questions directly, with clear structure and FAQ markup;
- listings in the directories AI tools draw from (Xero's advisor directory, Clutch and similar);
- tracking of AI-referred visits, and of whether Qubik gets cited.

It costs time rather than ad spend, and it compounds.

Outbound, as a test.

- **Who:** 100 named A$3–10M distributors, found through LinkedIn Sales Navigator and industry lists.
- **How:** three touches each: a LinkedIn message from Dominic, an email referencing their business, and a call.
- **Compliance:** cold email must meet the Spam Act. Use business addresses that are published and relevant to the person's role, identify Qubik, and include an unsubscribe.
- **Success:** a 5%+ reply rate and 3–5 meetings from the 100.

7. Test budgets

These are ad spend only, ex GST. Each step after the first happens only if the previous threshold is met.

Test	When	Budget range	Moves on if
Meta prospecting, mid-market	Days 8–21	A$900 (fixed, per the brief)	Cost per qualified lead A$750 or less, with 1+ qualified lead

Test	When	Budget range	Moves on if
Meta prospecting, scaled	Days 22–30 and month 2	A$1,500–3,000 a month	Cost per qualified lead holds as spend rises
Meta retargeting	From day 15	A$150–300 a month	Second-touch leads qualify at a similar rate
Google Search (Qubik mid-market)	Days 15–45	A$600–1,200	Qualified leads at A$1,000 or less each
LinkedIn Lead Gen	Days 21–45	A$1,000–2,000	At least one qualified lead per A$1,000
Meta, trades	Month 2	A$900–1,500	The same thresholds as mid-market

Total ad spend in month 1:

- **Minimum** (the Meta test only): **A$900**.
- **Full range** (all of the above, if every threshold is met): **about A$4,000–7,500**.

The minimum case on its own still answers the main question: will Meta bring qualified mid-market leads?

8. Costs, tools, specialists and hours needed

Tool prices are estimates to confirm when signing up.

Item	What for	Estimate
Meta ad spend	Mid-market test, then scaling; trades from month 2	A$900 test, then A$1,500–3,000 (see test budgets)
Google test	Search campaign for about four weeks	A$600–1,200 (see test budgets)
LinkedIn test	Lead Gen Form test	A$1,000–2,000 (see test budgets)
CRM	Pipeline, sequences, reporting	Free to about A$50–100 per user/month
SMS, booking calendar	Speed to lead, reminders	Cents per SMS; free to ~A$20/month for booking
LinkedIn Sales Navigator	Outbound test, if run	~A$150/month
Fluent Forms	Landing page form	Free
Qubik web/IT	WordPress access, a backup, plugin approval	~2–3 hours in week 1
Automation specialist	CRM build, sample report, demo dashboard	~15–20 hours in weeks 1–3
Dominic	Messaging sign-off, 30–60 minute video shoot, weekly 30-minute review	~3 hours in month 1
Sales	Calls within 15 minutes, discovery calls, lead feedback	Capacity for ~5–15 calls in weeks 2–4
My hours	Setup, assets and landing page build in weeks 1–2, then campaigns and reporting	~45–55 hours in weeks 1–2, then ~15–20 hours a week

9. Metrics I'd be measured on

Leading indicators (weekly):

- cost per qualified lead by channel;
- share of leads that qualify;
- meetings held and the show rate;
- speed to lead;
- creative hold rate and click-through.

Lagging indicators (monthly):

- diagnostics sold;
- builds sold;
- collected revenue by channel;
- CAC;
- the time from first touch to cash.

How these link to my commercial terms is for a separate discussion.
