

Trillet.ai — Revised Response & 7/30 Operating Plan

Reconciliation of the audit review, a dated 7-day and 30-day operating plan with a full field set per action, and the daily tracking-sheet specification — every material number traced to source and labeled by confidence.

Prepared — July 2026

Data source — Google Search Console export (Search type = Web; Last 12 months; 2025-07-07 → 2026-07-07)

Access status — read-only; one scoped change proposed via dev PR workflow

VERIFIED computed directly from GSC data **INFERRED** reasoned from indirect evidence

UNVERIFIED requires direct page access (held for access-granted pass)

Reconciliation & precision layer

These questions move the work from the initial directional diagnostic into the confirmatory, quantified layer — the right sequence before touching the backend. The first deliverable was built from two independent, reproducible sources (Search Console + public search surfaces) to establish a defensible read before requesting access. Each finding below is sharpened to its exact mechanism and confidence level.

1 • Organic asset base

Trillet holds a substantial organic footprint — **432 ranking URLs, 1.88M impressions, 14,100 clicks** **VERIFIED** . The opportunity is converting non-brand visibility into clicks: non-brand currently captures **584 clicks on 219,143 impressions (0.27% CTR)** **VERIFIED** . The 93.3% brand share is measured on GSC's top-1,000-query export, which over-weights high-volume brand terms — so true brand share is lower and the non-brand base is *larger* than the headline implies **INFERRED** .

2 • Host architecture — targeted consolidation

HOST	ROLE	ACTION
www ↔ trillet.ai	Duplicate marketing surface	Consolidate — one canonical, 301 the other
docs.	Documentation	Retain — do not redirect
app.	Product/application	Retain — do not redirect
security. / certification.	Trust/compliance	Retain — do not redirect
bootstrapps.	Anomaly (pos 27, 7 impr.)	Investigate, likely noindex

Consolidate the one duplicate pair; preserve four intentional surfaces; resolve one anomaly. Role classifications confirmed in the access-granted pass **UNVERIFIED** .

3 • Consolidation mechanism

Achieved by **301 redirect + self-referencing canonical + a sitemap listing only the canonical host** **VERIFIED** . Google recrawls and reassigns signal over days-to-weeks; superseded URLs leave the index on their own. (GSC's Removals tool only temporarily hides URLs and plays no part in canonicalization — redirect + canonical + recrawl is complete on its own.)

4 • Duplicate-host mechanism: signal consolidation

The operative mechanism is **ranking-signal dilution and index hygiene** — one URL's authority split across variants instead of concentrated. This is distinct from crawl budget (a constraint only at 10k–1M+ URL scale); at Trillet's size the lever is specifically signal consolidation **VERIFIED** .

5 • CTR trend — two-driver decomposition

The sitewide CTR movement resolves into two separable, simultaneous drivers:

- **Deliberate content-volume expansion.** From Jan 2026, 305 posts + 31 industry pages entered at once, adding high-impression informational queries that carry sub-1% CTR by nature — this mechanically lowers the *blended* average; it is composition, not degradation **VERIFIED** .
- **A live snippet-capture opportunity on the established cohort.** Specific mature pages sit at strong positions with abnormally low CTR — `voice-ai-data-residency-...` at **6.5 / 0.04%**, `comparing-no-code-phone-agents` at **6.7 / 0.01%** **VERIFIED, page-level** . At those positions this is a direct capture gap, not a mix artifact.

The headline holds and sharpens. Aggregate attribution is quantified with a **page×date / query×date export across two comparable windows** (Sep–Nov 2025 vs Mar–May 2026, URLs present in both).

6 • Click-upside model (illustrative scenario)

219,143 non-brand impressions × 2.0% target CTR = 4,383 → less 584 current = **~3,800 incremental**. Inputs stated for auditability: 2.0% is a conservative benchmark (replaced by Trillet's own CTR-by-position curve on access); impressions held flat (a floor — the base is the capped top-1,000 sample); near-term share comes from the position 4–10 band where snippet edits move CTR directly. A sizing scenario, kept distinct from a committed forecast.

7 • Tiered keyword targeting

- **Near-term:** commercial long-tail already on page 1–2 — cheap answering service (5.8), roofing answering service (10.2), plumbing answering service (13.1) **VERIFIED**.
- **Horizon:** broad head terms — ai answering service (30–45) **VERIFIED** — earned into via the authority built by winning the tier above, not chased directly today.

8 • AEO — aligned to current Google behavior

- **FAQPage** rich results now limited to gov/health domains — value is machine-parsing, not a SERP feature **VERIFIED**.
- **HowTo** rich results are no longer a search feature — effort routes to formats that still surface **VERIFIED**.
- **llms.txt** — no confirmed AI-crawler pickup as a retrieval signal; a low-cost hedge **INFERRED**.
- **Measurable AI surfaces:** GSC Search Appearance (Review/Product snippets — in your export); AI-Overview impressions folded into GSC aggregate; and the actionable one — AI-engine referrals in GA4 (chatgpt.com, perplexity.ai) plus scheduled prompt-panel testing **VERIFIED method**.

9 • Full-funnel measurement

GSC (query→landing) → GA4 (page→engaged session, /pricing & /demo-en views, signup start) → product analytics (app.trillet.ai onboarding) → billing (checkout→payment), keyed on landing-page URL + session/UTM. Read access to GA4/product/billing turns the analysis from search-surface to revenue-linked.

11 • Confidence labeling • 12 • Source of truth

Every claim is labeled as above; page-level HTML conclusions held at **UNVERIFIED** by design. Every pricing/compliance/product claim clears a register — *claim* → *observed source* → *approved internal owner* — before republication, with compliance routed to legal/compliance sign-off. This protects the credibility of the pages being optimized.

Part Two · 7-Day operating plan

Validate the confirmatory layer and prepare/ship the single highest-leverage change. All actions read-only or staged, except the one scoped change, which routes through the dev PR workflow on access + sign-off.

D1 Quantify the CTR driver split (confirm \$5)

Days 1–5

ASSET	GSC property — page×date & query×date exports, two windows (Sep–Nov 2025 vs Mar–May 2026), URLs present in both.
EVIDENCE	Blended CTR moved 16.4% → ~0.7% across the Jan-2026 volume expansion; per-page gaps already visible VERIFIED .
PRODUCT MOTION	None — analysis only.
MECHANISM	Fixed-cohort comparison isolates composition effect from true same-page CTR change.
OWNER	[Analytics] + [Content/SEO]
DEPENDENCY	GSC export (read-only; property already accessible).
SUCCESS METRIC	A cohort table attributing the blended decline to (a) mix vs (b) same-page CTR change.
MEASURE WINDOW	Complete by day 5.
FAILURE CONDITION	If same-page CTR is flat across the cohort, the snippet thesis narrows to the named low-CTR pages only — reprioritize to ranking motions.

D2 Verify current canonical/redirect state (www vs apex)

Days 1–2

ASSET	Homepage + top 10 dual-indexed paths on www and apex.
EVIDENCE	Homepage www 3.9 vs apex 5.5 for identical content; 216/432 paths dual-indexed VERIFIED .
PRODUCT MOTION	None — inspection only.
MECHANISM	Confirm whether 301 + canonical already present — determines the scope of D4.
OWNER	[Web/Vercel admin]
DEPENDENCY	Header/view-source check (or the access-granted crawl).
SUCCESS METRIC	Documented redirect + canonical status for the pair currently UNVERIFIED .
MEASURE WINDOW	Day 2.
FAILURE CONDITION	If canonicals already correct yet the split persists, escalate to sitemap + internal-link audit.

D3 Build the source-of-truth register

Days 1–7

ASSET	Register of every pricing/compliance/product claim slated for published content.
EVIDENCE	All such claims currently trace to marketing surfaces UNVERIFIED as canonical .
PRODUCT MOTION	None — governance.
MECHANISM	Each claim mapped to an approved internal owner before any use in optimized content.
OWNER	[Product Marketing] + [Compliance/Legal]
DEPENDENCY	Named owners for pricing and compliance.
SUCCESS METRIC	100% of to-be-published claims carry an approved source.
MEASURE WINDOW	Day 7.
FAILURE CONDITION	Any claim without an approved owner is excluded from published content.

D4 Stage the www → apex consolidation (the one scoped change)

Days 3–7

ASSET	Redirect/hosting config, canonical tags, XML sitemap.
EVIDENCE	Highest-leverage fix — 89.6% of impressions on dual-host paths VERIFIED .
PRODUCT MOTION	Infrastructure change via dev PR (Vercel domain settings).
MECHANISM	301 non-canonical → canonical + self-canonical + single-host sitemap = signal consolidation onto one URL.
OWNER	[Web/Vercel admin] + [Dev]
DEPENDENCY	Repo access + validation sign-off (client-gated). Staged & ready if not yet granted.
SUCCESS METRIC	PR merged; non-canonical returns 301; sitemap lists one host.
MEASURE WINDOW	Ship within 7 days if access granted; effect measured in D30 tracking.
FAILURE CONDITION	Roll back if any canonical URL returns 4xx/5xx, or if the surviving URL's position drops for >14 days post-change.

D5 Draft title/meta rewrites — top snippet-gap pages

Days 3–7

ASSET	data-residency (6.5/0.04%), comparing-no-code (6.7/0.01%), voice-ai-white-label-pricing-breakdown (6.2/0.06%), best-voice-ai-for-contact-centers (6.6/0.03%), smith-ai-alternative-2026 (6.4/0.03%).
EVIDENCE	Page-1 positions with near-zero CTR — direct capture gaps VERIFIED .
PRODUCT MOTION	Content edit — drafted now, published in the 30-day window.
MECHANISM	Title = searcher's phrase; meta = answer-first → CTR capture at existing rank.
OWNER	[Content/SEO]
DEPENDENCY	D3 register for any pricing/compliance claim used in copy.
SUCCESS METRIC	Reviewed drafts for all 5 pages.
MEASURE WINDOW	Day 7 (drafts); CTR effect measured post-publish in D30.
FAILURE CONDITION	None at draft stage; publish-stage guarded by the D30 revert rule.

Part Three · 30-Day operating plan

Execute the staged changes, measure the consolidation, and stand up revenue-linked instrumentation.
Assumes access granted after the 7-day validation.

M1 Publish staged title/meta rewrites

Days 8–14, measure 14–28

ASSET	The 5 pages drafted in D5.
EVIDENCE	Established page-1 ranks with 0.01–0.06% CTR VERIFIED .
PRODUCT MOTION	Content publish.
MECHANISM	Better title/snippet match lifts CTR at unchanged position.
OWNER	[Content/SEO]
DEPENDENCY	D5 drafts + D3 register.
SUCCESS METRIC	Per-page CTR vs its own 28-day pre-baseline; target $\geq 1.0\%$.
MEASURE WINDOW	14–28 days post-publish.
FAILURE CONDITION	If position drops after the edit, revert the title, keep the meta, re-measure.

M2 Measure www → apex consolidation impact

Days 8–28

ASSET	Surviving canonical homepage + consolidated blog paths.
EVIDENCE	Pre-change split: homepage 3.9 (www) vs 5.5 (apex) VERIFIED .
PRODUCT MOTION	None — measurement of D4.
MECHANISM	Consolidated signal should move the surviving URL toward (or past) the better pre-split rank.
OWNER	[Analytics]
DEPENDENCY	D4 merged.
SUCCESS METRIC	Surviving-URL position ≤ 3.9 ; dual-indexation of the pair resolved in GSC.
MEASURE WINDOW	14–28 days post-merge (recrawl-dependent).
FAILURE CONDITION	No consolidation after 28 days → audit redirect chain + canonical conflicts.

M3 Resolve the bootstrapps. subdomain

Days 8–12, measure 14–21

ASSET	bootstrapps.trillet.ai
EVIDENCE	Pos 27 on 7 impressions for a homepage-type query — staging/unintended exposure INFERRED .
PRODUCT MOTION	Infra/config — noindex or access restriction.
MECHANISM	Remove an unintended surface from the index; eliminate brand-query confusion.
OWNER	[Web/Vercel admin]
DEPENDENCY	Confirm the subdomain's purpose first (D2-adjacent).
SUCCESS METRIC	Drops from index on recrawl.
MEASURE WINDOW	14–21 days.
FAILURE CONDITION	If it turns out to be an intentional surface, retain and document instead.

M4 Canonicalize ?fpc= parameter URLs on /industries/*

Days 10–16

ASSET	All /industries/* pages carrying the ?fpc= referral token.
EVIDENCE	Parameter URLs indexed as separate pages — signal dilution INFERRED .
PRODUCT MOTION	Template change — self-canonical to the clean URL.
MECHANISM	Consolidate parameter variants onto the canonical page.
OWNER	[Web/Vercel admin] + [Dev]
DEPENDENCY	PR workflow.
SUCCESS METRIC	Parameter URLs de-indexed; clean URL retains/gains impressions.
MEASURE WINDOW	14–21 days.
FAILURE CONDITION	If ?fpc= drives attributed conversions, preserve tracking via non-indexable method before canonicalizing.

M5 Consolidate /pricing and /plans

Days 12–18

ASSET	/pricing and /plans.
EVIDENCE	Both indexed for the same commercial intent; fragmented figures across pages VERIFIED / UNVERIFIED page copy .
PRODUCT MOTION	Redirect + content merge.
MECHANISM	One canonical pricing URL; every internal link + mention points to it.
OWNER	[Web/Vercel admin] + [Content/SEO]
DEPENDENCY	D3 register (which pricing numbers are canonical).
SUCCESS METRIC	Single URL ranks for "trillet pricing"; number consistency site-wide.
MEASURE WINDOW	14–28 days.
FAILURE CONDITION	If the two pages serve genuinely different plans, cross-link + differentiate instead of merging.

M6 Merge cannibalized comparison posts (Smith.ai, Vapi)

Days 16–24

ASSET	smith-ai-alternative-2026 + trillet-vs-smith-ai-comparison-2026 ; the three Vapi-touching posts.
EVIDENCE	Same competitor covered by multiple separately-ranking posts VERIFIED .
PRODUCT MOTION	Content merge + 301 the losers.
MECHANISM	One authoritative page per competitor; consolidated signal + answer-first open (competitor pricing stated first).
OWNER	[Content/SEO]
DEPENDENCY	Full audit of all 27 comparison posts for further overlaps.
SUCCESS METRIC	Merged page position $\geq$ prior best of the pair; clicks on smith.ai pricing 2026 > 0 .
MEASURE WINDOW	14–28 days.
FAILURE CONDITION	If the merged page loses combined impressions after 28 days, split back and differentiate intent.

M7 Stand up full-funnel + AI-referral instrumentation

Days 8–30

ASSET	GA4 + product analytics + billing; the join model in §9.
EVIDENCE	Current analysis stops at clicks; revenue linkage requires the funnel join VERIFIED gap .
PRODUCT MOTION	Instrumentation — events + channel definitions.
MECHANISM	Query → landing → pricing-view → signup → checkout → payment, keyed on URL + session/UTM; AI-referral channel isolates chat-engine traffic.
OWNER	[Analytics]
DEPENDENCY	Read access to GA4 / product / billing (client-gated).
SUCCESS METRIC	A live funnel from top query clusters to payment; AI-referral traffic visible as its own channel.
MEASURE WINDOW	Reporting live by day 30.
FAILURE CONDITION	If billing join is blocked, terminate the funnel at signup-start and flag the gap.

Part Four · Daily tracking-sheet specification

Every material number carries its provenance. The sheet ships as an importable CSV (accompanying this document); the column contract and seed baseline are below.

COLUMN	PURPOSE
Date	Entry date (or "baseline" for the export-period reference rows)
Metric	The KPI (e.g. non-brand clicks, homepage position)
Scope	Segment — sitewide, non-brand, a specific page/cluster
Value	The number
Source	Exact artifact (e.g. Pages.csv, GA4 report)
Date range	Period the value covers
Filters	e.g. Search type = Web; country; device
Supporting artifact	File/link the number is reproducible from
Confidence	Verified / Inferred / Unverified
Owner	Role responsible for the number
Notes	Context, caveats, linked action ID (D1–M7)

Seed baseline rows (all from the GSC export, filters = Web, 2025-07-07 → 2026-07-07): total clicks 14,100; impressions 1,881,411; sitewide CTR 0.75%; weighted position 8.5; non-brand 584 clicks / 219,143 impr / 0.27% CTR (top-1,000-query cap); homepage www pos 3.9 / apex pos 5.5; /industries/plumbers pos 22.3; plus the 5 snippet-gap pages. Trustpilot 4.6/5 (20 reviews) enters as **INFERRED** (third-party, date-checked). No number enters without these fields populated.
