Qubik AI & Automation: First 30 Days, Reporting and Terms

Prepared for: Qubik Accounting

Prepared by: Vinaygopal Mawandia · ⟦DATE⟧

Covers: the 30-day plan, mid/large company marketing, the "100 leads, no clients" scenario, weekly reporting, resources, my reward metrics, and reactivating the 3,800 existing leads.

Figures marked "estimate" are planning assumptions to be replaced by real numbers from week 2 onwards. Everything else is my recommendation.

Days 1–30: deliverables, owners, dependencies and thresholds

Three streams run side by side:

1. reactivating the 3,800 existing leads, which is the fastest route to revenue;
2. the A$900 Meta test for new A$3–10M distributors;
3. preparing the mid/large company (dashboard) pipeline.

The first two produce the early meetings. The third builds the bigger deals.

Days 1–7: set up and check before spending

Deliverable	Owner	Depends on
CRM pipeline live, with stages: Lead → Qualified → Meeting held → Proposal → Paid → Collected	Automation specialist (build), me (stage definitions)	CRM choice and access
Lead form, SMS and email sequences built and tested with dummy leads, including opt-outs, duplicates and booking stops	Me (copy, rules), automation specialist (build)	CRM, SMS/email tool, calendar
Audit of the 3,800 leads: source, age, consent, duplicates, bounced emails; segmented by size, industry and previous relationship	Me	Export of the list; Qubik's consent records
Offer sign-off: founding-client price, standard price, credit terms, call script	Dominic (sign-off), me (draft)	—
Phone-filmed video with Dominic: 3 hooks for Meta, plus 1 reactivation video	Me (script, edit), Dominic (on camera)	1 hour of Dominic's time
Meta: AUD ad account, Page access, privacy policy updated for ads and custom audiences	Me, Qubik IT	Admin access
Weekly report template agreed (see section 3)	Me, Dominic	CRM stages
Mid/large target list: first 30 named companies and decision-makers	Me	ICP agreed with Dominic

Go/no-go for day 8:

- a test lead travels from the form to the CRM, gets the SMS and email, books a call and is handed to sales, with nothing broken;
- at least 60% of the 3,800 are contactable once bounces and duplicates are removed (estimate; this sets the size of the reactivation);
- sales commits to calling new leads within 15 minutes during business hours.

If any of these fails, launch moves back. Spend doesn't start on a broken funnel.

Days 8–14: launch and first signal

Deliverable	Owner	Depends on
Reactivation wave 1: the best ~600 contacts (most recent and closest fit), email plus SMS or call, carrying the reel and a free 30-minute call offer	Me (messages), sales (calls)	Consent check passed
Meta custom audience of contactable leads (hashed upload), served the reel and the offer	Me	Privacy policy covers it
A$900 Meta test live: one ad set, three hooks	Me	Creative, form, tracking
First discovery calls held; lost reasons logged in the CRM	Sales	Booked calls
First weekly report (Monday)	Me	CRM data

Test and stop thresholds:

Signal	Keep going	Change something	Stop
Meta at A$450 spent	2+ leads, 1+ qualified	Leads arrive but none qualify: tighten the form and callout	No leads at all: pause and change the hook
Reactivation wave 1 (600 contacts)	2%+ reply or book (12+)	1–2%: rewrite the message and offer	Under 1%, or unsubscribes/complaints over 1%: stop and review the list and message
Email deliverability	Bounces under 3%	3–5%: clean the list	Over 5% bounces or any spam block: stop email and fix the domain setup

Days 15–30: prove the conversion

Deliverable	Owner	Depends on
Reactivation waves 2–3 (remaining contactable leads), using the winning message from wave 1	Me, sales	Wave 1 results
Meta: continue the winning hook and extend budget only if the cost per qualified lead is A$750 or less	Me	Week 2 data
First diagnostics sold and started	Sales, automation specialist	Meetings held
Mid/large: outreach to the first 30 accounts (LinkedIn and email), one dashboard demo built on sample data	Me (outreach), automation specialist (demo)	Target list, demo data
Case-study permission requested from the first diagnostic clients	Sales	Signed clients
Day-30 review with Dominic: what to scale, what to stop	Me, Dominic	Weekly reports

Day-30 targets (estimates; the reactivation list carries most of these):

Measure	Scale up	Hold and fix	Stop
Qualified meetings held (all sources)	10+	5–9	Fewer than 5
Diagnostics sold	2+ (A$7,000+)	1	None after 10+ meetings held: fix offer and sales before any more spend
Cost per qualified lead (paid sources)	A$750 or less	A$750–1,000	Over A$1,000: stop paid, focus on reactivation and referrals

1. Marketing to medium and large companies (dashboards and automation)

My assumption: this means businesses of roughly A$20M+ turnover or 50+ staff, buying management dashboards plus the automation that feeds them. Please correct me if the call meant something different.

Who buys. The CFO or finance manager, often with the COO. The CEO signs off larger projects. They rarely buy from an ad. They buy from someone they trust, after seeing something working.

The hook. *"Your numbers on Monday morning, not at month end."* Most companies this size have Xero or an ERP, a CRM, and spreadsheets in between. Finance spends the first week of every month rebuilding the same reports, so decisions are made on numbers already three or four weeks old. The pitch is one dashboard of cash, margin, sales pipeline and stock, refreshed automatically from the systems they already own, built by accountants who know what the numbers should say.

The offer. A fixed-price *Dashboard Pilot*. We connect two or three of their systems and build one live management dashboard in about four weeks. The pilot price is set with Qubik, and it's credited against the full build. Afterwards a monthly support retainer keeps the dashboard and its automations running. That gives Qubik recurring revenue, not one-off projects.

Channels (Meta is the wrong main channel for this group):

1. **Account-based outreach.** 30–50 named companies a month, found through LinkedIn Sales Navigator and industry lists. Each gets a personal message, plus a 90-second video showing a sample dashboard for their industry. Dominic sends it from his own profile.
2. **LinkedIn ads,** targeted by job title (CFO, Finance Manager, COO) and company size, which Meta can't do. Small budget, aimed at the named accounts.
3. **Partners.** Xero and ERP consultants, business bankers, and the industry associations Qubik is already part of. They meet these companies first.
4. **Small-room events.** A breakfast for 10–15 CFOs in Brisbane, "What your month-end close should look like in 2027", with a live demo.
5. **Existing clients.** Qubik's larger clients are the first pilots and the first case studies.

What to measure: accounts contacted, conversations, demos given, pilots sold. The cycle is longer (60–120 days), so these deals show up mostly after day 30.

2. If 100 leads produced no paying clients

First, the plan shouldn't let it reach 100. At A$150–225 per lead, that's A$15,000–22,500 of spend, and the day-14 and day-30 stop rules pause spending long before then. But if 100 leads did arrive with no paying client, I'd work out where in the funnel they stopped, because each stage points to a different fix:

Where they stopped	Likely cause	What I'd do
Few qualified (under 20 of 100)	Wrong people: the targeting or hook attracts small businesses and tyre-	Tighten the callout and form, raise the revenue gate, change the hook; check how many leads were outside

Where they stopped	Likely cause	What I'd do
	kickers	the target range
Qualified, but few meetings (under 50% held)	Too slow, or a weak reason to talk	Measure response time; test a call within 5 minutes; give the call a clearer payoff ("you'll leave with your top 3 automation opportunities")
Meetings held, no diagnostic sold	Offer, price or proof	Listen to call recordings; interview 5–10 people who didn't buy; test a lower-risk entry (shorter assessment, money-back if we find no saving above the fee, or the fee credited in full)
Diagnostics sold, no build	The diagnostic doesn't make the business case	Check the diagnostic reports: is the dollar figure big enough, and is the build scope priced to match?

Each of these goes in front of Dominic with numbers, not opinions. If the gap is still unexplained after the fixes, the honest conclusion is that this segment isn't buying through this channel. Then we switch to the reactivated leads, referrals and the mid/large pipeline rather than keep spending.

3. Weekly report

Every Monday, from the CRM, with one page of commentary covering what worked, what didn't, and next week's changes.

Metric	Definition	Source
Spend	Ad spend plus tools for the week (A$, ex GST)	Meta/Google invoices, tool bills
Leads	New contacts entering the pipeline, by source (Meta, reactivation, referral, outbound)	CRM
Qualified leads	Passed the gates: right size, a decision-maker, a real need	CRM stage, set by sales
Cost per qualified lead	Paid spend ÷ qualified leads from paid sources	Calculated
Meetings held	Discovery calls that actually happened (no-shows excluded)	Calendar and CRM
Proposals	Diagnostic or pilot proposals sent, with value	CRM
Paid clients	Signed and invoiced (diagnostics and builds counted separately)	CRM, Xero
Collected revenue	Cash received this week (not invoiced or booked)	Xero
CAC	All acquisition costs (ad spend, tools, my fees) ÷ new paying clients; shown weekly and as a running total, because single weeks swing	Calculated

Every lead keeps its first source, so a client who first came from the reactivated list but signed after seeing an ad is still counted as reactivation. The report shows the current week, the previous week, the total to date, and a simple funnel from leads to collected revenue.

4. Additional costs, tools, specialists and hours

Tool prices change; please treat these as estimates to confirm when we sign up.

Item	What for	Estimated cost
Ad spend	Meta test (A$900), then scaling; LinkedIn for mid/large	A$900 to start; A$1,500–3,000/month after day 30 if the numbers hold
CRM with pipeline and sequences	Lead tracking, stages, email sequences, reporting	Free (HubSpot free) to about A$50–100/user/month for paid tiers
SMS sending	Speed-to-lead texts and reminders	About 5–10 cents per SMS
Booking calendar	Self-serve booking with reminders	Free to about A$20/month
LinkedIn Sales Navigator	Mid/large account research and outreach	About A$150/month
Email domain setup	Separate sending domain, so the reactivation doesn't hurt Qubik's main email	Small one-off
Qubik automation specialist	CRM build (about 10–15 hours in week 1), then delivering diagnostics	Internal
Dominic	Video recording (1 hour), offer sign-off, LinkedIn outreach from his profile (about 2 hours a week)	Internal
Sales	Calling leads within 15 minutes; discovery calls	Internal; capacity needed for 10–20 calls in weeks 2–4
My time	Setup about 30–40 hours in days 1–7, then about 15–20 hours a week	⟦my rate⟧

5. How I'd propose to be measured and paid (for discussion)

I'd like most of my upside tied to cash Qubik actually collects, with a small base to cover the fixed setup and weekly work.

Component	Proposal	Why
Base fee	⟦A$X per month⟧ for setup, campaigns, reactivation and reporting	Covers the hours regardless of sales-cycle timing
Qualified meeting held	⟦A$X⟧ per meeting accepted by sales and actually held	Rewards quality, not volume; sales decides what counts
Diagnostic revenue	⟦X%⟧ of collected diagnostic fees	Paid only on cash collected
Implementation revenue	⟦X%⟧ of collected build fees within 6 months of the lead's first contact	Ties me to the outcome that matters to Qubik
Retainer revenue (mid/large)	⟦X%⟧ for the first 12 months	Rewards recurring revenue

Guardrails I'd suggest:

- payment on collected cash only, refunded if the fee is refunded;
- the CRM's first-source field decides attribution;
- reactivated leads earn a lower percentage than new leads, because Qubik already owns them;
- a review at day 30 and day 90, and either side can adjust the terms.

Reactivating the 3,800 existing leads

I couldn't open the Facebook reel from my side, because the link needs a login. I'll fit the reel's message into the steps below once I've seen it. I've also assumed these are past enquiries and contacts of Qubik's; the consent and age of each record decide what we're allowed to do.

Next steps

1. **Export and audit (days 1–3).**
   - Find where each lead came from, when, and what consent was given.
   - Remove duplicates and bounced or invalid emails.
   - Check mobile numbers against the Do Not Call Register before any calls.
1. **Segment (days 3–5).**
   - **A: recent and good fit** (last 2 years, a business, likely A$3M+). Called by a person.
   - **B: older but a business.** Email and SMS, plus Meta retargeting.
   - **C: individuals, very old, or no consent.** Meta custom audience only, or excluded.
1. **Consent rule.** Email and SMS go only to people with express or clearly inferred consent, such as a past enquiry or business relationship. Every message identifies Qubik and has a working unsubscribe. Anyone uncertain goes into the Meta audience (allowed under an updated privacy policy) rather than the inbox. *Qubik should confirm this with its privacy adviser.*
2. **Message.** Short and personal from Dominic: "We've started helping businesses like yours automate the paperwork that slows them down. Here's a 60-second video [the reel]. Want a free 30-minute look at what's worth automating?" Then a reply, a booking link, or a call from the team.
3. **Send in waves.** Wave 1 to about 600 of segment A and the best of B (days 8–14), so we learn before using the whole list. Waves 2–3 to the remainder (days 15–30), using the winning message.
4. **Retarget everyone contactable** on Meta with the reel and the offer for 30 days. People who watch it get a second, offer-led ad.
5. **Follow up.** Two follow-ups over 10 days, then a monthly useful email (an automation example or a Xero tip) for anyone who didn't respond.

Run rate (estimate)

Step	Conservative	Base	Notes
Leads on file	3,800	3,800	
Contactable after clean-up and consent	2,300 (60%)	2,700 (70%)	Depends on list age and records
Respond or book (2–3%)	45	80	Email, SMS, calls and retargeting combined
Qualified (40%)	18	32	Right size and real need
Meetings held (70%)	13	22	
Diagnostics sold (35% of meetings)	4–5 (~A$16,000)	7–8 (~A$27,000)	At A$3,500 each
Builds (25–50% of diagnostics)	1–2 (~A$75,000–150,000)	2–4 (~A$150,000–290,000)	At the A$73,500 midpoint

Timeline

When	What
Weeks 1–2	Audit, segment, consent check, video, wave 1
Weeks 2–5	Calls held; first diagnostics sold, worth A$3,500 each in cash
Weeks 5–9	Diagnostics delivered (3 weeks each); build proposals
Weeks 8–16	First builds signed; deposits collected; build revenue lands from about month 3

The list is the cheapest source of early proof: the cost is mostly time and the video, not ad spend. The first case studies from it will then strengthen every paid campaign after.

Sources

- **What I still need:** the 3,800-lead export with source, date and consent fields; access to the Facebook reel (a download or screenshots); confirmation of the mid/large scope from our call; Qubik's CRM choice.
- **Earlier plan and data:** ABS business counts (June 2025); Meta audience estimates (October 2026); the brief's conversion rates and A$57–90k build range.
- **Compliance references:** ACMA Spam Act guidance; the Do Not Call Register; Qubik's privacy policy (to be updated for ads and custom audiences).
