Qubik Accounting: Tax-Debt Lead Reactivation Plan

Prepared for: Qubik Accounting

Prepared by: Vinaygopal Mawandia · 3 November 2026

Data: Qubik lead-flow export, 3 November 2026. 509 tax-debt leads from June to November 2026, with full call, SMS and email history.

Goal: turn stalled and lost tax-debt leads into clients through one email and SMS funnel, starting with the leads closest to signing.

Counts come from the export. Conversion figures marked "estimate" are planning assumptions, replaced by real results after the first sends.

1. What the data shows

Measure	Result
Active leads (excluding 13 deleted)	496
Became opportunities	168 (34%)
Became clients	31 (6.2%); the most complete cohort, July, reached 7.6%
Estimated value per client	Median about A$2,100; average about A$8,700
Time to client	Median 4 days to opportunity, 28 days to client
Opportunities stuck at ID verification	61 of 124 open opportunities (60 contactable)
Open leads with no next step recorded	126 of 170, median age 62 days
Leads reached by phone vs never reached	38.5% vs 5.7% become opportunities

Two conclusions shape the plan:

1. **Most of the quick revenue is inside the pipeline already.** It sits with people who started but stopped at ID verification or an unsigned proposal.
2. **Calling more won't fix the rest.** Leads already average 11 calls each, and only 30% of calls connect. Email and SMS let people come back when they're ready.

2. Segments

Every lead is placed in exactly one segment. The lead-by-lead list is supplied separately as a CSV keyed by lead reference, ready to import into the email platform.

Segment	Who	Leads	Email OK	SMS OK	High priority (A$50k+ debt)
T1 Stuck at ID verification	Opportunities that stopped at the ID check	60	60	60	37
T2 Proposal sent, not accepted	Final proposal sent or awaiting acceptance in Ignition	18	18	17	12
T3 Open lead, never reached	Enquired, never spoke to anyone; median age 18 days	47	45	47	22
T4 Open lead, reached but stalled	Spoke to the team, no next step; median age 70 days	123	120	123	44
T5 Lost: chose not to proceed	Said no; median 90 days ago	95	93	58	27
T6 Lost: other reason	Lost for "other" or unrecorded reasons	41	40	9	9
Total to reactivate		**384**	**376**	**314**	**151**

Excluded (125):

- current clients (27);
- active opportunities that sales is still working (38);
- "not a target" or "did not enquire" (46);
- deleted records (13);

- do-not-contact (1).

Within each segment, **A$50k+ debt goes first**. Those leads reach opportunity most often (55% for A$100k+, 43% for A$50–100k). Leads from the old form's "A$0–50k" band convert worst (21%), so they get the lighter sequences.

Channel rules:

- Email to everyone who hasn't bounced or opted out.
- SMS only where consent is recorded and the person hasn't opted out (13 have opted out).
- The do-not-contact lead is excluded from everything.

3. Offers and hooks that fit tax debt

People with ATO debt want certainty and a way out, not a discount, so there is **no Black Friday or sale branding**. The seasonal moments are used as deadlines and reasons to act.

Hook	Message	Used for
Free tax-debt review	"A free 30-minute online review of where you stand with the ATO and what your options are."	T3, T4, T5
Finish what you started	"You're one step away: complete your ID check so we can act on your file."	T1
Your proposal is ready	"Your plan is waiting. Here's what happens once you accept, and the answers to common questions."	T2
Interest now costs more	Since 1 July 2025, ATO interest charges are no longer tax-deductible, so carrying ATO debt costs more than it used to.	T4, T5, T6
Lodge even if you can't pay	Lodging on time avoids extra penalties, even when payment needs a plan. Agent BAS date 25 November; quarter-two BAS due 1 March 2027.	T3–T6
Before the Christmas break	"Know your options before we close for Christmas."	T3–T5
New Year plan	"Start 2027 with a plan for your ATO debt."	T4–T6

Options a review can cover: payment plans, requests to remit penalties or interest, catching up on overdue lodgements, and restructuring options where Qubik offers them and the client is eligible.

All wording must meet the Tax Practitioners Board's rules: no guaranteed outcomes and no promises about what the ATO will do. Dominic signs off the final copy.

4. Sequences by segment

Segment	Day 0	Day 2–3	Day 6–7	Day 10–14	Then
T1 ID check	SMS: "2 minutes to finish your ID check" + link	Email: how to do it, and why it's needed	SMS reminder	Email: "Stuck? Reply and we'll help"	Sales notified on completion; monthly email if no action
T2 Proposal	Email: proposal recap and next steps	SMS: "Your plan is ready to accept" + link	Email: answers to common questions	Email: "Shall we keep your file open?"	Monthly email
T3 Never reached	Email: "Sorry we missed you" + online booking	SMS with booking link	Email: "Your options with ATO debt, explained"	SMS: last reminder	Seasonal emails
T4 Reached, stalled	Email: "Has anything changed?" + review offer	—	Email: interest-deductibility change	SMS (if they opened or clicked): booking link	Seasonal emails
T5 Chose not to proceed	Email: "No pressure: here's what's changed"	—	Email: free review, before Christmas	SMS only to people who clicked	New Year email
T6 Lost, other	Email: free review offer	—	—	—	Monthly email only

Funnel rules:

- A booking or ID completion stops all reminders.
- Any reply pauses the sequence, and a person answers within one business day.
- STOP or unsubscribe removes the person from every channel immediately.
- A bounce removes the address.

- Anyone with no clicks after 4 emails is moved to a sunset list.

Sending rules:

- Weekdays only; SMS between 10am and 6pm.
- No more than 2 emails and 1 SMS a week per person.
- Every message identifies Qubik and has a working opt-out.

5. Calendar

Dates	What runs
Mon 9 Nov	T1 and T2 start; sales gets a daily list of T1 completions
Mon 16 Nov	T3 starts; T4 email 1
Mon 23 Nov	"Lodge even if you can't pay" email before the 25 November agent BAS date (T3–T6)
30 Nov – 18 Dec	T5 starts; "before the Christmas break" review offer (T3–T5) with SMS to people who engaged
21 Dec – 4 Jan	Pause
5 – 29 Jan	"Start 2027 with a plan" (T4–T6); T1 and T2 follow-up for anyone still open
February	Reminder that the quarter-two BAS is due 1 March; monthly nurture continues

6. Expected results (estimate)

Segment	Leads	Next step	Assumption (conservative – base)	New clients
T1 ID check	60	Complete ID	30–45% complete; 25–40% of those sign	4–11
T2 Proposal	18	Accept	20–35% accept	4–6
T3 Never reached	47	Book a review	10–20% book; about 40–50% of those become opportunities; 20–25% of opportunities sign	0–1
T4 Reached, stalled	123	Book a review	5–10% book; then as T3	1
T5 Chose not to proceed	95	Re-open	3–6% re-open; 25–30% sign	1–2
T6 Lost, other	41	Re-open	2–4% re-open; 25–30% sign	0–1
Total	**384**			**about 10–22**

What it's worth:

Basis	Range for 10–22 clients
Median client value (~A$2,100)	about A$21,000–46,000
Average client value (~A$8,700, lifted by a few large files)	about A$87,000–191,000

About 80% of the expected clients come from T1 and T2, which is why they start first.

7. Thresholds

Signal	Keep going	Change something	Stop
T1: ID checks completed within 7 days	30%+	15–30%: simplify the instructions, add a short how-to video	Under 15%: check whether the ID tool itself is the blocker
Bookings or replies (T3–T6, per send)	2%+	1–2%: change the subject, hook or offer	Under 1% across two sends
Bounces	Under 2%	2–5%: re-verify	Over 5%: pause and clean
Spam complaints	Under 0.1%	0.1–0.3%: slow down	Over 0.3%: stop the segment
Unsubscribes	Under 1%	1–2%: reduce frequency	Over 2%: stop and review

8. Fixes to the lead flow itself

The same data shows why leads stall in the first place. Fixing these protects every new lead from now on:

- **Speed to first contact.** The median is 15 hours, and a quarter of leads wait more than 3.7 days. Leads contacted within an hour reach opportunity about twice as often as leads first contacted after 1–3 days (about 43% against 20%). Send an automatic SMS and email within 5 minutes, then call.
- **Call timing.** Calls connect about 40% of the time from 8 to 10am, against 23–28% in the afternoon. Tuesday is the best day.
- **ID verification.** Half of open opportunities stop here. Review the step: number of screens, mobile experience, and whether a short how-to video helps.
- **Next steps.** 126 open leads have no sub-status. Every open lead should have a next action and date.
- **Data hygiene:**

  - standardise state (missing for 54%, inconsistent where present) and debt bands (three formats);
  - fix the AI qualification, which returns "unclear" for every lead;
  - populate the empty reactivation fields so this campaign can be tracked.
- **Ads.** Ad "Image Batch 2-1" and ad set "Finance #3" convert best so far (about 50% to opportunity), and the June 2026 form with verification brings better leads than the October 2025 form (45% against 29%).

9. Weekly report

By segment, each week:

- emails and SMS delivered;
- click and reply rates;
- bounces, complaints and unsubscribes;
- ID checks completed (T1);
- proposals accepted (T2);
- reviews booked and held;
- new clients and estimated value;
- spend.

10. What I need to start

- **Offer and copy sign-off** from Dominic: the free review and the wording on options.
- **Systems:** email platform access (or approval to set one up), a separate sending domain with DNS access, and an SMS sender.
- **Links:** the ID-verification link and the proposal (Ignition) link format for T1 and T2 messages, plus an online booking link for reviews.
- **A daily hand-off:** who in sales receives T1 completions and T2 acceptances.
- **Confirmation** that Qubik's privacy adviser is comfortable with the consent basis for SMS and email.
