

Trillet.ai — Revised Response & Operating Plan

Reconciliation updated to verified source evidence, plus a four-workstream operating plan: technical fixes, content revamp, new content, and SaaS-marketplace profiles — every action carrying the full field set and every material number traced to source.

Prepared — July 2026 (v2)

Sources — GSC (Web; Sep–Nov 2025 & Mar–May 2026 windows), robots.txt, sitemap.xml, page view-source, GA4

Access — read-only; scoped changes via dev PR workflow

VERIFIED from Trillet's own data/source **INFERRED** from indirect evidence **UNVERIFIED** needs access not yet granted

Reconciliation — now evidence-complete

We pulled the direct sources (page HTML, robots.txt, sitemap, two matched Search Console windows). That moves the open items from inferred to verified, and surfaced two concrete, high-leverage findings not visible from search data alone.

1 • Organic asset base

432 ranking URLs, 1.88M impressions, 14,100 clicks **VERIFIED**. The gap is non-brand *clicks*: 584 clicks on 219,143 impressions (0.27% CTR) **VERIFIED**. The 93.3% brand share sits on the capped top-1,000-query export and over-weights brand — non-brand base is larger than the headline implies **INFERRED**.

2 • Rendering & AI-crawler access — confirmed

Site is **server-side rendered** (full article HTML present pre-JavaScript) **VERIFIED** — so GPTBot/ClaudeBot/PerplexityBot *can* read it; the earlier client-render risk is closed. robots.txt explicitly allows the major AI crawlers and the `*` default covers the rest **VERIFIED**. Minor cleanup: tokens should be `PerplexityBot / ClaudeBot`, not `Perplexity / Claude-Web` (wildcard covers them regardless).

3 • Canonicalization — direction settled

Every signal already names **apex**: robots `Host: https://trillet.ai`, sitemap lists apex only, page `rel=canonical` → apex **VERIFIED**. Yet **www** ranks and takes impressions (homepage `www` 3.9 vs apex 5.5, identical content) **VERIFIED**. Missing piece: no 301. The fix — **301 www → apex** — is low-risk because it aligns reality to intent already declared, not a directional bet.

4 • Duplicate-signal mechanism

The issue across hosts and `?fpc=` params is **signal dilution / index hygiene**, not crawl budget (only a factor at 10k–1M+ URLs) **VERIFIED**. The sitemap is clean (apex-only, no params), so `?fpc=` is a runtime tracking artifact to canonicalize **VERIFIED**.

5 • CTR trend — decomposed with matched cohorts

COHORT	SEP–NOV 2025	MAR–MAY 2026
Blended (all pages)	3.97% / pos 5.33	0.52% / pos 7.98
Stable pages (both)	3.98% / 5.32	3.74% / 5.23
New pages (Mar–May only)	—	0.20% / 8.26

Blended CTR fell 3.45pp; **93% is composition** — 292 new pages entered at 0.20% CTR (now 91% of impressions) while the **established cohort held CTR and position** **VERIFIED**. Never a site-wide snippet failure; the opportunity is a scoped set of well-ranked new pages.

6 • Click-upside on Trillet's own curve

Trillet's CTR-by-position curve is 29% at position 1 (brand) then **0.1–0.6% across positions 2–10** **VERIFIED** — far below normal, pointing to intent mismatch / AI Overviews. Scoping to the ~10 pages ranking ≤10 yet well below curve, modeled to curve-expected CTR: **~113 clicks/month (~1,360/year)** — a sizing scenario, not a forecast.

7 • A verified, systematic on-page bug

The meta description truncates mid-word at ~200 characters (e.g. "...value-added servi"), and the same cut string feeds the OG tag, Twitter tag, and the visible on-page subtitle **VERIFIED**. If site-wide (very likely — template behaviour), **every search snippet ends mid-word**. One code fix, site-wide CTR reach — plausibly a bigger lever than any single title rewrite.

8 • AEO / structured data

Article + BreadcrumbList JSON-LD with a real schema'd author (good E-E-A-T) **VERIFIED**, but "Frequently Asked Questions" sections carry **no FAQPage schema** **VERIFIED** — a parsing gap for answer engines. HowTo rich results are retired. Measurable AI surfaces: GSC Search Appearance, AI-Overview impressions (folded into aggregate), AI-engine referrals in GA4.

9 • Content sprawl & cannibalization — mapped

The sitemap (~300+ posts) exposes near-duplicate clusters — `white-label-ai-profit-margins / -profit-margin-analysis`; `how-to-sell-ai-chatbots-local-businesses / -to-local-businesses`; a data-residency trio; three My-AI-Front-Desk posts — plus a **systematic overlap** where `/industries/{trade}` competes with `/blogs/ai-answering-service-for-{trade}` and `/blogs/white-label-ai-for-{trade}` **VERIFIED**. Self-competition fits the industry pages being stuck (plumbers pos 22). Consolidation now outweighs new volume.

10 • Full-funnel measurement

GA4 + PostHog + GTM installed **VERIFIED**. Current GA4 (4 wks): thin funnel — 562 users, concentrated on homepage & `/pricing` — and **Key Events = 0 on every row**, so intent isn't measurable until events are configured **VERIFIED**. Payment stage deliberately Phase 2.

11 • Trust signals

Trustpilot 4.6/5 (20 reviews) exists but isn't surfaced on-site **VERIFIED**. **No G2 / Capterra / TrustRadius / Product Hunt** **VERIFIED** — a gap in trust, backlinks, review snippets, and AI-engine citations (LLMs lean on these for "best software" queries). Dedicated workstream below.

12 • Source of truth

Every pricing/compliance/product claim traces to marketing surfaces **UNVERIFIED as canonical**. Each is gated behind a register — *claim* → *source* → *approved owner* — compliance to legal sign-off before republication.

Part Two · 7-Day plan — validate & ship the low-risk wins

Confirm the cohort finding, prepare the two highest-leverage changes, and stand up the register. All read-only or staged except the scoped changes, which route through the dev PR workflow on access + sign-off.

D1 Confirm the meta-truncation bug is site-wide

Days 1–2

ASSET	Meta-generation template; spot-check 8–10 pages across blog/industry/core.
EVIDENCE	Description cut mid-word at ~200 chars on the sampled page; reused in OG/Twitter/subtitle VERIFIED (1 page) .
PRODUCT MOTION	None — inspection.
MECHANISM	Confirms whether one template fix corrects every snippet.
OWNER	[Content/SEO] + [Dev]
DEPENDENCY	view-source of the sample (no access needed).
SUCCESS METRIC	Documented scope: % of sampled pages truncated.
WINDOW	Day 2.
FAILURE CONDITION	If only some templates truncate, scope the fix per-template.

D2 Stage the two scoped technical PRs

Days 2–7

ASSET	(a) 301 www → apex at Vercel domain settings; (b) meta-description generator (word-boundary trim at ~155 chars).
EVIDENCE	All signals declare apex, no 301 VERIFIED ; meta truncation VERIFIED .
PRODUCT MOTION	Infra + template change via dev PR.
MECHANISM	301 consolidates signal onto apex; trim fixes every snippet at once.
OWNER	[Web/Vercel admin] + [Dev]
DEPENDENCY	Repo access + sign-off (client-gated). Staged & ready otherwise.
SUCCESS METRIC	PRs merged; www returns 301; descriptions end on a word ≤155 chars.
WINDOW	Ship in 7 days if access granted; effect measured in 30-day.
FAILURE CONDITION	Roll back 301 if any canonical URL 4xx/5xx or rank drops >14 days.

D3 Build the source-of-truth register + claim owners

Days 1–7

ASSET	Register of pricing/compliance/product claims destined for published content.
EVIDENCE	All claims currently trace to marketing surfaces UNVERIFIED as canonical .
PRODUCT MOTION	Governance.
MECHANISM	Each claim → approved owner before use; compliance → legal.
OWNER	[Product Marketing] + [Compliance/Legal]
DEPENDENCY	Named owners.
SUCCESS METRIC	100% of to-be-published claims have an approved source.
WINDOW	Day 7.
FAILURE CONDITION	Any unowned claim is excluded from content.

D4 Configure GA4 Key Events for intent

Days 2–5

ASSET	GA4 events for <code>/pricing</code> view, <code>/demo-en</code> view, signup-start.
EVIDENCE	Key Events = 0 across the current export VERIFIED .
PRODUCT MOTION	Analytics config (no site change).
MECHANISM	Turns pricing intent into a measurable metric per landing page.
OWNER	[Analytics]
DEPENDENCY	GA4 admin access (held).
SUCCESS METRIC	3 key events firing; a landing-page → intent report renders.
WINDOW	Live by day 5; 6-month backfill not possible — forward-only.
FAILURE CONDITION	If events can't be defined without a code change, add to the D2 PR.

D5 Map the cannibalization clusters for consolidation

Days 3–7

ASSET	All ~300 sitemap slugs + the <code>/industries</code> vs <code>/blogs</code> vertical overlaps.
EVIDENCE	Concrete near-duplicate clusters identified from the sitemap VERIFIED .
PRODUCT MOTION	Analysis → a merge/redirect map.
MECHANISM	One canonical page per intent; 301 the losers → consolidated signal.
OWNER	[Content/SEO]
DEPENDENCY	GSC per-page clicks to pick the winner in each cluster.
SUCCESS METRIC	A ranked merge map: keep / merge / 301, per cluster.
WINDOW	Day 7 (feeds the 30-day content-revamp work).
FAILURE CONDITION	Where two pages serve distinct intent, differentiate instead of merging.

Part Three · 30-Day plan — four workstreams

Execute across technical, content revamp, new content, and marketplace profiles. Assumes access granted after the 7-day validation. Owners are role placeholders for assignment.

WORKSTREAM A · TECHNICAL

T1 Publish 301 www → apex & meta-trim; measure

Days 8–28

ASSET	The two D2 PRs; homepage + top dual-indexed paths.
EVIDENCE	Pre-change split homepage 3.9 (www) vs 5.5 (apex) VERIFIED .
PRODUCT MOTION	Ship + monitor.
MECHANISM	Consolidated signal moves the surviving URL toward the better pre-split rank; full-length snippets lift CTR.
OWNER	[Web/Vercel admin] + [Analytics]
DEPENDENCY	D2 merged.
SUCCESS METRIC	Surviving homepage ≤3.9; dual-indexation resolved in GSC; site-wide CTR on the stable cohort +.
WINDOW	14–28 days (recrawl).
FAILURE CONDITION	No consolidation after 28 days → audit redirect chain / canonical conflicts.

T2 Canonicalize ?fpc= params & resolve bootstrapps.

Days 10–18

ASSET	/industries/*?fpc= URLs; the bootstrapps.trillet.ai subdomain.
EVIDENCE	Parameter URLs indexed separately INFERRED ; bootstrapps pos 27 on a homepage query INFERRED .
PRODUCT MOTION	Self-canonical on param pages; noindex/restrict bootstrapps.
MECHANISM	Consolidate parameter variants; remove an unintended surface from the index.
OWNER	[Web/Vercel admin] + [Dev]
DEPENDENCY	Confirm bootstrapps purpose first; preserve ?fpc= attribution via non-indexable method.
SUCCESS METRIC	Param URLs & bootstrapps drop from index on recrawl.
WINDOW	14–21 days.
FAILURE CONDITION	If bootstrapps is intentional, retain & document instead.

T3 Add FAQPage schema + clean AI-crawler tokens

Days 12–22

ASSET	Blog/pricing pages with FAQ sections; robots.txt.
EVIDENCE	FAQ content present, no FAQPage schema VERIFIED ; robots tokens dated VERIFIED .
PRODUCT MOTION	Template + robots edit via PR.
MECHANISM	Machine-readable Q&A for answer engines; correct crawler tokens (PerplexityBot , ClaudeBot , 0AI-SearchBot).
OWNER	[Dev] + [Content/SEO]
DEPENDENCY	D3 register (claims inside FAQs must be approved).
SUCCESS METRIC	Valid FAQPage schema on target pages (Rich Results Test); robots tokens corrected.
WINDOW	14 days.
FAILURE CONDITION	n/a — additive, low-risk.

WORKSTREAM B · CONTENT REVAMP (EXISTING PAGES & BLOGS)

CR1 Rewrite titles/meta on the capture-gap pages

Days 8–16, measure 14–28

ASSET	white-label-ai-profit-margins (pos 4.2/0.04%), how-to-sell-ai-chatbots-local-businesses (6.0/0.24%), white-label-ai-chatbot-pricing-comparison (6.0/0.11%), voice-ai-vs-text-chatbot-comparison (5.3/0.07%), ai-receptionist-white-label-pricing (5.2/0.13%).
EVIDENCE	Rank ≤ 10 , CTR far below Trillet's own curve VERIFIED .
PRODUCT MOTION	Content edit.
MECHANISM	Title = searcher's phrase; answer-first meta (full-length after T1) → CTR capture at existing rank.
OWNER	[Content/SEO]
DEPENDENCY	T1 meta-trim live; D3 register for any claim.
SUCCESS METRIC	Per-page CTR vs own 28-day baseline; target toward curve ($\geq 0.6\%$, stretch $\geq 1\%$).
WINDOW	14–28 days post-publish.
FAILURE CONDITION	If rank drops post-edit, revert title, keep meta, re-measure.

CR2 Consolidate near-duplicate clusters (merge + 301)

Days 12–26

ASSET	The D5 merge map — profit-margins $\times 2$, sell-ai-chatbots $\times 2$, data-residency $\times 3$, My-AI-Front-Desk $\times 3$, Smith.ai $\times 2$, Vapi $\times 3$, the white-label pricing cluster.
EVIDENCE	Near-duplicate slugs confirmed in sitemap VERIFIED .
PRODUCT MOTION	Merge best content into one page per intent; 301 losers.
MECHANISM	Ends self-competition; concentrates signal on one authoritative URL.
OWNER	[Content/SEO]
DEPENDENCY	D5 map; T-workstream redirect capability.
SUCCESS METRIC	Merged page position $\geq$ prior best of its cluster; cluster impressions retained/gained.
WINDOW	14–28 days.
FAILURE CONDITION	If a merge loses combined impressions after 28 days, split & differentiate intent.

CR3 Resolve /industries vs /blogs vertical overlap

Days 16–28

ASSET	Per trade: /industries/{trade}, /blogs/ai-answering-service-for-{trade}, /blogs/white-label-ai-for-{trade} (plumbers, electricians, hvac, roofing...).
EVIDENCE	3 assets per trade competing; plumbers page stuck at pos 22 VERIFIED .
PRODUCT MOTION	Assign one primary intent per URL (industry page = commercial "[trade] answering service"; blog = informational), cross-link, differentiate or merge.
MECHANISM	Stops internal competition so the strongest page can reach page 1.
OWNER	[Content/SEO]
DEPENDENCY	CR2 method; start with plumbers/hvac/roofing (highest demand).
SUCCESS METRIC	/industries/plumbers moves from pos 22 toward page 1 in 28 days.
WINDOW	14–28 days.
FAILURE CONDITION	If demand supports both, keep both with distinct intent + internal links.

CR4 Answer-first openers + surface Trustpilot proof

Days 14–26

ASSET	Comparison/"best of" posts; competitor-pricing posts (smith.ai, vapi, synthflow pricing).
EVIDENCE	Competitor-pricing queries rank page 1, 0 clicks VERIFIED ; Trustpilot 4.6/5 unused on-site VERIFIED .
PRODUCT MOTION	Rewrite openers to state the answer/competitor number first; embed the Trustpilot rating.
MECHANISM	Satisfies the query in sentence one (AEO); real third-party proof raises credibility of self-authored comparisons.
OWNER	[Content/SEO]
DEPENDENCY	D3 register for pricing figures.
SUCCESS METRIC	Clicks on competitor-pricing pages > 0; AI-Overview presence on target queries.
WINDOW	14–28 days.
FAILURE CONDITION	n/a — content quality improvement.

WORKSTREAM C · NEW CONTENT (SELECTIVE — CONSOLIDATION-FIRST)**NC1 One canonical "AI answering service cost" hub**

Days 12–24

ASSET	New pillar page absorbing the scattered cost/pricing posts; targets the 195-query cost cluster.
EVIDENCE	Cost cluster: 49,503 impressions, 0.09% CTR — largest underserved commercial intent VERIFIED .
PRODUCT MOTION	New page; 301 thin pricing posts into it; FAQPage schema; real numbers (from register).
MECHANISM	Answer-first, comprehensive, schema'd → captures bottom-funnel "cheap/cost answering service" intent Trillet already ranks for.
OWNER	[Content/SEO]
DEPENDENCY	D3 register (pricing sign-off); D5 map for which posts to fold in.
SUCCESS METRIC	Ranks page 1 for "ai answering service cost/pricing"; CTR ≥ curve for its positions.
WINDOW	21–35 days to rank.
FAILURE CONDITION	If it cannibalizes /pricing, canonicalize the informational hub to /pricing for commercial terms.

NC2 Fill the Voicify gap + a comparison hub

Days 14–28

ASSET	New <code>trillet-vs-voicify</code> page; a <code>/compare</code> hub linking one canonical page per competitor.
EVIDENCE	Demand for a Voicify comparison with no existing page INFERRED ; 27 scattered comparison posts VERIFIED .
PRODUCT MOTION	One new page + a hub that organizes the consolidated (CR2) competitor pages.
MECHANISM	Captures the gap; the hub gives internal-link structure + a single entry point for "trillet alternatives".
OWNER	[Content/SEO]
DEPENDENCY	CR2 (competitor consolidation) first, so the hub links canonical pages.
SUCCESS METRIC	Voicify page indexed & ranking; hub passes internal link equity to competitor pages.
WINDOW	21–35 days.
FAILURE CONDITION	Skip any competitor page that would duplicate an existing strong one.

NC3 One authoritative compliance/data-residency hub

Days 16–30

ASSET	Merge the data-residency trio + HIPAA/TCPA/ACMA/GDPR content into one pillar targeting the zero-click compliance cluster.
EVIDENCE	Compliance cluster: 5,885 impressions, 0.00% CTR — real strength, zero capture VERIFIED .
PRODUCT MOTION	New/merged pillar; lead with "included on every plan"; FAQPage schema.
MECHANISM	Consolidates a genuine differentiator into one page that states it first — for both search and enterprise buyers.
OWNER	[Content/SEO] + [Compliance/Legal]
DEPENDENCY	Legal sign-off on every compliance claim (D3).
SUCCESS METRIC	Clicks on the HIPAA/compliance cluster > 0; enterprise landing-page engagement (GA4).
WINDOW	21–35 days.
FAILURE CONDITION	No compliance claim publishes without legal approval — hard gate.

WORKSTREAM D · SAAS-MARKETPLACE PROFILES & OFF-PAGE

MP1 Create/claim & complete core marketplace profiles

Days 8–20

ASSET	G2, Capterra + GetApp + Software Advice (one Gartner Digital Markets submission feeds all three), TrustRadius, Product Hunt . Secondary: AlternativeTo, SaaSwothy, Slashdot/SourceForge.
EVIDENCE	No presence on any today VERIFIED ; competitors (Retell, Vapi, Bland, Synthflow) are listed & reviewed INFERRED .
PRODUCT MOTION	Claim/create; complete to 100% — description, categories, screenshots, pricing tiers, integrations, media.
MECHANISM	Adds trust signals, high-authority backlinks, review rich-snippet eligibility, and — key — the sources AI answer engines cite for "best AI receptionist / voice AI" queries.
OWNER	[Product Marketing]
DEPENDENCY	D3 register for pricing/feature claims; brand assets.
SUCCESS METRIC	Live, 100%-complete profiles on the 5 core platforms; correct category placement (AI Voice / Conversational, Answering Service).
WINDOW	Profiles live by day 20.
FAILURE CONDITION	If a profile already exists (unclaimed), claim & correct rather than duplicate.

MP2 Seed reviews from the existing happy-customer base

Days 14–30

ASSET	The Trustpilot 4.6/5 cohort + recent successful onboardings; a review-request flow (email + in-app prompt).
EVIDENCE	20 Trustpilot reviews exist VERIFIED ; G2/Capterra empty VERIFIED .
PRODUCT MOTION	Compliant review-generation campaign (no incentivized/gated reviews that violate platform ToS).
MECHANISM	A threshold of recent reviews unlocks category ranking, star rich-snippets, and citation weight in AI answers.
OWNER	[Product Marketing]
DEPENDENCY	MP1 profiles live; customer contact list.
SUCCESS METRIC	≥10 reviews each on G2 + Capterra within 30 days; ≥4.0 avg.
WINDOW	Rolling; first cohort by day 30.
FAILURE CONDITION	Never incentivize in a way that breaches platform policy — reputational + delisting risk.

MP3 Instrument marketplace + AI-referral attribution

Days 12–30

ASSET	UTM'd profile links; GA4 referral + AI-engine channel (chatgpt.com, perplexity.ai, etc.).
EVIDENCE	AI-engine referrals are the one directly measurable GEO signal VERIFIED method .
PRODUCT MOTION	Tag profile outbound links; build the GA4 referral view; add a quarterly prompt-panel test (ask the LLMs, log citations).
MECHANISM	Connects marketplace presence & AI citations to actual sessions/intent, closing the loop on the workflow.
OWNER	[Analytics] + [Product Marketing]
DEPENDENCY	D4 key events; MP1 live.
SUCCESS METRIC	Referral + AI-referral traffic visible as its own channel; prompt-panel baseline recorded.
WINDOW	Reporting live by day 30.
FAILURE CONDITION	If AI referrals are un-attributable, fall back to the prompt-panel test as the GEO proxy.

Part Four · Daily tracking sheet

Every material number carries metric · value · source · date range · filters · supporting artifact · confidence. Ships as the accompanying CSV; new v2 rows track the meta-fix CTR lift, the stable-cohort CTR, /industries/plumbers position, GA4 key-event intent, and marketplace review counts.

Seed baselines (GSC, Web): stable-cohort CTR 3.74% (Mar–May) · homepage www pos 3.9 / apex 5.5 · /industries/plumbers pos 22.3 · capture-gap pages per CR1 · non-brand CTR 0.27%. Trust: Trustpilot 4.6/5 (20). GA4 (Jun 15–Jul 12): 562 users, key events 0 (baseline before D4). Every row labeled verified/inferred/unverified; nothing enters without provenance.
