Practical Assignment: LLM Visibility & Growth Consultant (SoluLab)

Task 1: Previous success: Algoscale Technologies

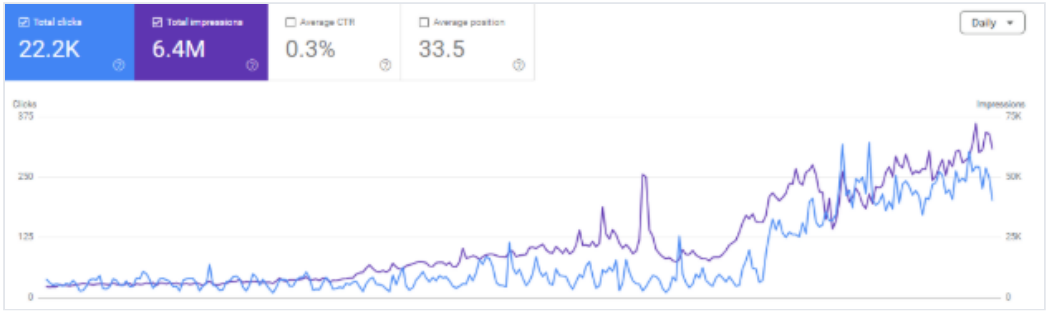

Company	Data and AI consulting, competing with Accenture, TCS and Deloitte. This is the same position SoluLab is in.
My role	Growth Marketing Manager, Dec 2024–present. I built the SEO function from zero and ran the AEO/GEO programme across 200+ target queries.
Constraint	No paid search. Organic and PR only.
Platforms	Google AI Overviews, ChatGPT, Perplexity, Gemini.

Three interventions that mattered most:

1. **Service and proof pages:** 100+ service pages, 25 case studies, a full site rebuild, and a topical-authority programme.
2. **PR:** placements in authoritative publications alongside Accenture, TCS and Deloitte.
3. **Community distribution:** Reddit, Quora, LinkedIn and niche data and AI communities, run as its own channel.

Results:

Metric	Result
AI visibility	50+ Google AI Overview placements, plus citations in ChatGPT, Perplexity and Gemini alongside Accenture, TCS and Deloitte
Pipeline	$1M+ in 6 months. More than 10% of monthly pipeline came from AI referrals.
Revenue	$450K realised, organic only
Traffic	0 → 65K monthly sessions in 12 months. US and Western leads +25% month on month.
Search Console	22.2K clicks, 6.4M impressions. Top service page: 9.67K clicks, 1.2% CTR. Top blog: 8.61K clicks, position 5.6.

Failed experiment: I scaled pages programmatically with templated location pages ("[service] in [location]") and tool pages ("[service] for [tool]"). It didn't prove effective. **Lesson:** templated pages add URLs, not reasons to be chosen, so I moved the effort to substantive service pages, case studies, PR and community distribution. SoluLab's Dubai and Saudi location pages show the same pattern (see Task 2).

The same method elsewhere:

- **Insighto.ai:** 0 → 30K sessions in 6 months, $100K ARR, 50–60 MQLs a month.
- **Taggbox / Tagshop:** Reddit, Quora and forum programmes across four products. Sessions 16K → 60K. A domain migration with zero traffic loss. 50+ enterprise MQLs a month.

Task 2: SoluLab's current AI visibility

Method:

- **Platforms:** ChatGPT (consumer answer with search), Perplexity (Sonar) and Google AI Mode, all through the DataForSEO API.
- **When and where:** October 27, 2026. US location for Q1, Q2 and Q5; UAE for Q3; Saudi Arabia for Q4.
- **Runs:** 3 per prompt per platform, so 45 in total, reported as rates.
- **Evidence:** every response and cited URL is saved (`task2-evidence/`).

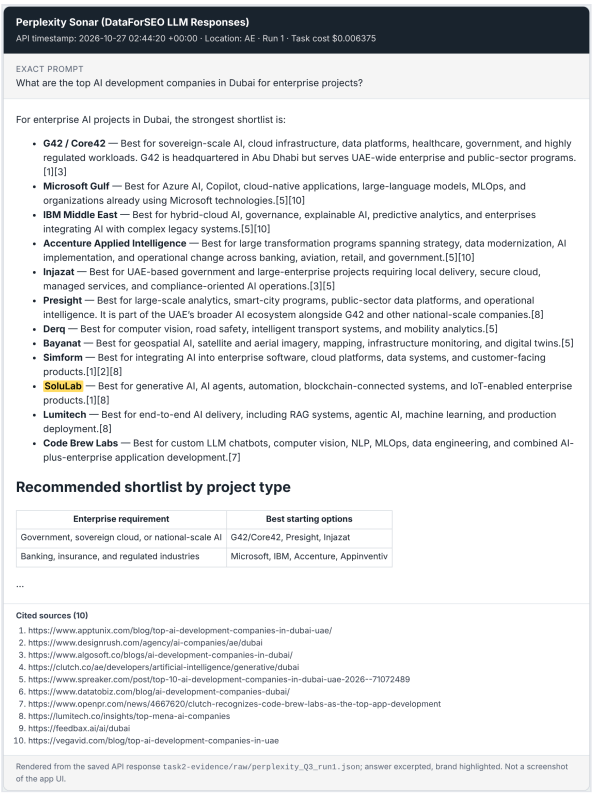

ID	Exact prompt	ChatGPT	Perplexity	AI Mode	Competitors named most	Most-cited third-party sources
Q1 (US)	"Which companies should a US enterprise consider to build custom AI agents? Give me a shortlist with a reason for each."	0/3	0/3	0/3	Accenture, IBM, EPAM, Cognizant, LeewayHertz	pixelmatters.com, christianandtimbers.com, hudasoft.com lists
Q2 (US)	"What are the best generative AI development companies in the USA for building an enterprise LLM application?"	0/3	0/3	0/3	**LeewayHertz (9/9)**, EPAM, Slalom, HatchWorks AI	tech.us (7/9 runs), agencycluster.com
Q3 (UAE)	"What are the top AI development companies in Dubai for enterprise projects?"	0/3	**3/3 recommended**	0/3	Presight, G42/Core42, Microsoft, IBM, Simform	lumitech.co, apptunix.com, designrush.com, masterofcode.com
Q4 (KSA)	"Recommend AI consulting firms in Saudi Arabia that can help a company with AI strategy and implementation."	0/3	0/3	0/3	McKinsey, BCG, Accenture, local Saudi consultancies	clutch.co (Saudi), labarna.ai, local firm sites
Q5 (US)	"How much does it cost to hire a company to build an AI agent, and which firms offer this service?"	0/3	0/3	0/3	Accenture, LeewayHertz, Moveworks	vantasoft.com, productcrafters.io cost guides

Headline: SoluLab was mentioned in **3 of 45** runs and **solulab.com was cited in 0**.

What the evidence shows:

1. **Recommendations come from third-party lists.** The Dubai mention traces to two lists that rank SoluLab: Apptunix (#5) and Lumitech (#8). Perplexity even reuses Lumitech's description of SoluLab.
2. **Position and consensus matter.** On the 15 most-cited US lists, LeewayHertz appears on 10 and SoluLab on 3, lower down (#6–#15). LeewayHertz gets named and SoluLab doesn't.
3. **Each platform uses different sources.** Perplexity cited the same sources in every run. ChatGPT and AI Mode overlapped by only about a third between runs, so a win on one platform doesn't carry over to another.

4. **The Gulf markets reward local presence.** Saudi answers cite Saudi firms, Clutch's Saudi category and even an Arabic-language page.

Perplexity Sonar (DataForSEO LLM Responses)

API timestamp: 2026-10-27 02:44:20 +00:00 · Location: AE · Run 1 · Task cost $0.006375

EXACT PROMPT

What are the top AI development companies in Dubai for enterprise projects?

For enterprise AI projects in Dubai, the strongest shortlist is:

- **G42 / Core42** — Best for sovereign-scale AI, cloud infrastructure, data platforms, healthcare, government, and highly regulated workloads. G42 is headquartered in Abu Dhabi but serves UAE-wide enterprise and public-sector programs.[1][3]
- **Microsoft Gulf** — Best for Azure AI, Copilot, cloud-native applications, large-language models, MLOps, and organizations already using Microsoft technologies.[5][10]
- **IBM Middle East** — Best for hybrid-cloud AI, governance, explainable AI, predictive analytics, and enterprises integrating AI with complex legacy systems.[5][10]
- **Accenture Applied Intelligence** — Best for large transformation programs spanning strategy, data modernization, AI implementation, and operational change across banking, aviation, retail, and government.[5][10]
- **Injazat** — Best for UAE-based government and large-enterprise projects requiring local delivery, secure cloud, managed services, and compliance-oriented AI operations.[3][5]
- **Presight** — Best for large-scale analytics, smart-city programs, public-sector data platforms, and operational intelligence. It is part of the UAE's broader AI ecosystem alongside G42 and other national-scale companies.[8]
- **Derq** — Best for computer vision, road safety, intelligent transport systems, and mobility analytics.[5]
- **Bayanat** — Best for geospatial AI, satellite and aerial imagery, mapping, infrastructure monitoring, and digital twins.[5]
- **Simform** — Best for integrating AI into enterprise software, cloud platforms, data systems, and customer-facing products.[1][2][8]
- **SoluLab** — Best for generative AI, AI agents, automation, blockchain-connected systems, and IoT-enabled enterprise products.[1][8]
- **Lumitech** — Best for end-to-end AI delivery, including RAG systems, agentic AI, machine learning, and production deployment.[8]
- **Code Brew Labs** — Best for custom LLM chatbots, computer vision, NLP, MLOps, data engineering, and combined AI-plus-enterprise application development.[7]

Recommended shortlist by project type

Enterprise requirement	Best starting options
Government, sovereign cloud, or national-scale AI	G42/Core42, Presight, Injazat
Banking, insurance, and regulated industries	Microsoft, IBM, Accenture, Appinventiv

Portfolio Services Industries About Us Insights Contact Us For Enterprises

Furthermore, trusted by Fortune 500s and agile startups alike, The NineHertz delivers AI solutions that don't just perform – but learn, adapt, and evolve.

Table of Content

Top 11 Artificial Intelligence Development Companies in Dubai, UAE (2027 Edition)

1. Apptunix
2. G42 (Group 42)
3. Blocktunix
4. The NineHertz
5. SoluLab
6. Simform
7. Cubix
8. TekRevol

Add us as a preferred source on Google

Specialties

The NineHertz offers a strong mix of traditional development and advanced AI capabilities:

- AI-powered mobile development and web app development
- Smart recommendation systems using ML algorithms
- NLP-driven chatbots with regional language support
- AI for business intelligence, analytics dashboards & reporting
- IoT + AI integration for smart home, healthcare, and logistics

Their ability to unify data, design, and decision-making makes them a go-to for businesses seeking innovation with clarity.

Why Choose The NineHertz in 2027?

As one of the most adaptable AI development agencies in UAE, The NineHertz combines domain knowledge with scalable AI systems that align perfectly with Gulf-region needs. Their Dubai team has delivered successful deployments across fintech, eCommerce, and healthcare, helping clients automate workflows, improve UX, and unlock new revenue channels.

5. SoluLab

Widely recognized for delivering intelligent automation and next-gen digital solutions, SoluLab continues to lead as a top-tier AI development companies Dubai, UAE that businesses trust in 2027. With clients ranging from funded startups to Fortune 500 brands, SoluLab is known for turning complex AI challenges into elegant and enterprise-grade solutions.

Their strength lies in merging strategy with execution, which helps businesses unlock scalable AI solutions that work across every touchpoint.

Specialties

SoluLab's portfolio spans a wide range of AI implementations, including:

App Monetization Strategies: How to Make Money From an App?

Source [1]: Apptunix "Top 11 AI development companies in Dubai". Browser screenshot, Oct 27, 2026.

One opportunity per query:

ID	Opportunity
Q1	Get onto the cited US AI-agent lists that include LeewayHertz but not SoluLab (pixelmatters, christianandtimbers, nerdheadz, inoxoft, signity). Ask Hudasoft, ScalaCode and DBB to update SoluLab's entry with a fresh case study.
Q2	Get into tech.us and agencycluster.com. Fix `/generative-ai-development-company/`, which is 3.3 MB of HTML; ChatGPT retrieved SoluLab's consulting page instead.

ID	Opportunity
Q3	Repeat the Perplexity win on ChatGPT and AI Mode sources: masterofcode.com, emtech.ae, quytech.com, and the Clutch UAE and DesignRush profiles.
Q4	Build a Saudi footprint first: a Clutch Saudi listing, outreach to labarna.ai, and an Arabic version of the KSA page.
Q5	Rebuild the AI-agent cost content as one hub that opens with SoluLab's real price bands (E2).

Also: SoluLab's own facts conflict. The site says 1,500+, 500+ and 150+ projects in different places, and both "US-based" and Ahmedabad. That weakens every recommendation (E3).

Limitations: these are API runs from a single day. A second test day is needed before any rate counts as stable.

Task 3: Three experiments to run first

E1. Get onto the third-party sources engines already cite (distribution)

Hypothesis / cluster	List-type prompts are built from a small set of cited third-party pages, so more and better placements there raise SoluLab's mention rate. Cluster: vendor-selection prompts Q1–Q4 plus 6 variants.
Action	Rank the cited URLs from Task 2 by frequency, then work the top 15. **Directories:** complete the AI services, UAE and KSA service areas, and get 5 new verified reviews. **Editorial lists:** pitch inclusion with an evidence pack (2 case studies with metrics, Clutch rating, a named expert). **Media:** 2 bylined articles, one US and one Gulf. **Forums:** disclosed answers from named engineers.
Why	Task 2 shows the mechanism directly: SoluLab's only recommendation came through two lists, and the competitor present on 10 of 15 lists gets named.
Baseline	Mentioned in 3 of 36 runs (8%). On 3 of the 15 most-cited lists, against LeewayHertz on 10.
Success / period	On at least 8 of 15 lists by week 6. Mention rate up at least 15 points at weeks 6 and 8. At least 2 AI-attributed inquiries by week 10.
Effort / owner	About 30 hours over 6 weeks. Owner: marketing executive, following the SOP in Task 4.
If it fails	If placements land but mentions don't move, re-check which sources are cited and shift to directories, then run E3. If placements don't land, offer authors data or an expert quote instead of "add us".

E2. Answer-first AI-agent cost hub (content)

Hypothesis / cluster	Cost prompts cite pages that give concrete price ranges. Cluster: Q5 plus 4 cost variants.
Action	Make `/how-much-does-it-cost-to-build-an-ai-agent/` the hub, with the run-cost and MVP posts as spokes. Open with a 50-word answer giving SoluLab's real range. Add a scope × cost × timeline table from the last 12 months of quotes, 3 anonymized project examples, sourced statistics, and a visible "Updated" date. Push through IndexNow and Search Console. **Control:** leave the LLM-cost post unchanged.
Why	GEO research (Aggarwal et al., KDD 2024) found that adding statistics and citations raised visibility by up to about 40%. SoluLab's cost posts currently open with "it depends".
Baseline	Q5: cited 0/9, and the cost page wasn't even retrieved.

Success / period	Cited in at least 25% of runs in weeks 4–6, with the control flat.
Effort / owner	About 14 hours. Owner: content lead, with sales input on prices.
If it fails	Confirm the new version is indexed in Bing and Google. Then distribute the same table through a named expert's LinkedIn article and a cited third-party cost guide.

E3. One set of company facts everywhere (entity)

Hypothesis / cluster	Buyers vet vendors through AI, so consistent facts make those answers more accurate. Cluster: "What is SoluLab", "Is SoluLab legit", "SoluLab reviews", "SoluLab vs LeewayHertz".
Action	Write a one-page fact sheet. Fix the conflicting stats strips and the schema address. Update the About page, schema and `llms.txt`. Align and merge external profiles (Clutch, GoodFirms, DesignRush, Built In, Crunchbase, LinkedIn). Publish a Reviews page.
Why	The facts are verifiably inconsistent today, and every fix is under SoluLab's control. It also protects deals already in the pipeline.
Baseline / success	Measure fact accuracy on 5 brand prompts before launch. Target at least 80% accuracy and zero contradictions by week 8.
Effort / owner	About 14 hours. Owner: marketing executive.
If it fails	Fix the specific sources cited in wrong answers. Model-memory errors lag, so re-measure quarterly.

Task 4: SOP for E1, third-party source inclusion

Owner: marketing executive. **Reviewer:** LLM visibility lead. **Cycle:** 2 weeks. **Inputs:** the prompt panel, the evidence pack (2 case studies, Clutch link, expert bio, a two-line differentiator), and the fact sheet. **Tools:** DataForSEO (or manual runs with screenshots), Google Sheets, directory dashboards, an email finder, HubSpot. **Deliverables:** a source tracker, an outreach log, updated profiles, and a fortnightly one-page report.

Steps:

1. **Measure:** run each prompt 3 times per platform. Save the responses and every cited URL.
2. **Build the source list:** for each cited URL, record the domain, its type (directory, editorial, media, forum or competitor self-list), the runs citing it, and whether SoluLab is listed and described accurately. Drop competitor self-lists.
3. **Prioritize:** score each source as times cited × feasibility (directory 3, editorial 2, media 1). Work the top 15.
4. **Directories (week 1):** align each profile with the fact sheet, add AI, UAE and KSA focus, and request 5 verified reviews from recent clients.
5. **Editorial and media (weeks 1–2):** a personalized pitch with one data point and the evidence pack. One follow-up after 5 working days.
6. **Forums (ongoing):** named engineers give useful, disclosed answers.
7. **Log** every contact, ask, response and live URL.
8. **Re-measure** in weeks 6 and 8 with the same prompts and run count.

Quality-control checklist:

- ☐ Every fact matches the fact sheet. No unapproved client names.
- ☐ No paid placement presented as editorial. No self-ranking posts on third-party platforms.
- ☐ Review requests follow platform rules: no incentives.

- ☐ Responses and logs saved for every measurement round.

Report (fortnightly): sources listed (n/15), mention rate by platform and prompt, new or lost cited sources, AI-referral sessions, and AI-attributed inquiries.

Repeat, improve or stop:

- **Repeat** on the next cluster (Gen AI, RWA, stablecoin) if SoluLab is on at least 6 of 15 lists and mentions are up 15 points at two re-measures.
- **Improve** if listings rise but mentions stay flat: move effort to the most-cited sources and run E3.
- **Stop** if fewer than 3 placements land after 2 cycles.

From visibility to the $30K Q1 and $250K annual targets

Attribution:

- A GA4 channel for AI referrers.
- First-touch source passed into HubSpot. SoluLab already runs HubSpot and a UTM grabber.
- A required "How did you hear about us?" field with an AI-assistant option, because many AI-influenced buyers never click.
- Deals tagged "AI-influenced" at discovery.

Commercial math: these assumptions are to be replaced with SoluLab's CRM rates.

- SoluLab's typical Clutch project size is $50K–$199K, so $250K is about 3–5 deals and $30K is one first-phase deal.
- At a 20–25% close rate, that needs about 15–20 AI-influenced SQLs a year.

Q1 order:

1. **E3,** which helps deals already in the pipeline.
2. **E1 on vendor-selection prompts,** for buyers who are shortlisting now.
3. **E2 on cost prompts,** for buyers who are budgeting.

Reported weekly: mention rates, AI referrals, AI-influenced SQLs, pipeline value and closed revenue against target.

Prepared with AI assistance for data collection and analysis. AI-platform results come from the dated runs described in Task 2.
