

SEO PROPOSAL FOR SFL WORLDWIDE

Rebuilding organic search for *sflworldwide.com*

Technical SEO, content, foundational backlinks and answer engine optimisation, delivered and implemented by Crown's team.

PREPARED FOR
SFL Worldwide

PREPARED BY
Crown SEO Agency

DATE
30 Sep 2026

VALID UNTIL
30 Oct 2026

What our audit found

We crawled all 455 pages of sflworldwide.com, benchmarked it against 11 competitors, scored 55 competing pages for content quality, and mapped 3,355 search keywords to SFL's pages.

99% of 2,651 core keywords have no page written for them	0 of 12 main shipping searches for other countries where SFL appears	30 of 40 core searches where SFL doesn't appear at all	144 retired URLs returning errors, none redirected
352 international car shipping keywords with no SFL page	5 core service pages telling Google to index the homepage instead	5× heavier HTML than the median competitor (784 KB vs 156 KB)	0 of 246 blog posts with structured data

The site passes the basics: all 455 sitemap pages return 200, every page has a meta description and one H1, and no image lacks alt text. The losses come from the issues below.

The international pages

CRITICAL · BIGGEST REVENUE GAP

SFL's international business is almost invisible in search

International shipping and moving are SFL's core business. SFL has 51 country shipping pages and 6 country moving pages, yet it doesn't appear in the main shipping search for any of 12 other countries, and 8 of its 10 core rankings are for India. Its car shipping page covers US domestic transport only.

1,474

core keywords for
destinations outside India

32%

median text each country
page shares with 10+ sibling
pages

Nov 2023

date of the rates shown on
the Pakistan and Nigeria
pages

- **Templated country pages.** With the country name swapped out, the New Zealand and Saudi Arabia pages share 68% of their text, Haiti and Jamaica 56%, and Denmark and Finland 54%. The same H2s appear on up to 51 pages.
- **Stale rates.** The Pakistan and Nigeria pages show "rates verified and updated in November 2023". The UK, Canada, Pakistan and Nigeria pages don't mention 2026 at all.
- **Missing answers.** The UK page lacks price per lb or kg and the UK address format. The Canada page lacks the de minimis threshold and dimensional weight. Competitor pages that rank cover both.
- **No international car shipping page.** 352 international car shipping keywords, including "how much does it cost to ship a car overseas" and "international car shipping companies", have nowhere to land. SFL's post that ranked #5 for these searches now returns 410.
- **Missing moving markets.** There are no moving pages for Dubai, the UK, Canada, Nigeria, the Philippines or South Africa; 230 core moving keywords have no page.
- **Missing corridors.** There are no pages for Sri Lanka or Bangladesh, both core South Asian routes.
- **Locale copies.** 31 of the 72 pages in `/en-in/` and `/en-ca/` have no hreflang, 12 page pairs across locales are identical, and `/en-in/blog` is empty.

Who wins these searches instead: Easyship (14 of 40 queries), Parcel Monkey (13), DHL (11), Meest (9) and Shippo (7). They lead with a live rate calculator, a price in the search result and data dated 2026.

Every finding, ranked

CRITICAL

Service pages canonicalised to the homepage

EVIDENCE

The FedEx, DHL, UPS, USPS and Domestic Shipping pages (1,255–2,629 words each) declare `https://www.sflworldwide.com` as their canonical URL, and their hreflang tags point to the homepage. Domestic Shipping is linked from 382 of 383 US pages.

IMPACT

Google is told not to index SFL's carrier-discount pages, its core offer. 373 carrier keywords such as "fedex shipping to india from usa cost" have no indexable page.

FIX

Self-referencing canonicals and correct hreflang on all five pages.

CRITICAL

144 retired URLs with no redirect

EVIDENCE

Of the 509 URLs in `/llms.txt`, 136 return 410 and 8 return 404. `/blog/is-it-worth-shipping-tv-from-usa-to-india` still ranks #3. Live pages link to 34 dead URLs (58 links), 8 of them on the HTML sitemap page.

IMPACT

Every retired URL's rankings and backlinks are thrown away, and visitors hit error pages.

FIX

301-redirect each retired URL to its closest live page; repair the 58 links; rebuild `llms.txt`.

CRITICAL

Blog posts that links don't reach

EVIDENCE

61 sitemap pages can't be reached through links, 52 of them blog posts. Another 146 posts are 4 or more clicks deep; the deepest is 51 clicks from the homepage. `/blog` lists 9 posts behind "Load More", and `/blog?page=2` returns the same 9. `robots.txt` disallows `/blog/page/`.

IMPACT

198 of 246 posts are unreachable or 4+ clicks deep, so they pass and receive little internal link value.

FIX

Crawable pagination, topic hubs and cross-links, so every post sits within 3 clicks of the homepage.

HIGH

Content that doesn't answer the search

EVIDENCE

Blog posts carry 8.1 figures per 1,000 words, against 10.7–55.8 on competitor blogs. "How Long Does It Take to Ship from the USA to India?" (1,657 words) gives no day count. 9 of 41 cost-titled posts contain no price. On all 246 posts, "Last updated" equals the publish date.

IMPACT

Searchers leave for competitors that give the number.

FIX

Put the answer, with a figure, at the top of every page; add dated rate tables; real update dates.

HIGH

No structured data on the blog; incomplete entity data

EVIDENCE

202 of 455 pages carry JSON-LD, and 0 of 246 blog posts do. The 9 Organization blocks have no `sameAs`. There's no LocalBusiness markup for the 5 offices. One FAQ answer is empty (Australia). The default share image is 211×153 px on 438 pages.

IMPACT

Search engines and AI assistants can't reliably identify SFL's articles, authors or offices.

FIX

BlogPosting, BreadcrumbList, Person, Organization, WebSite and LocalBusiness markup in every template.

HIGH

Heavy, uncached pages

EVIDENCE

Median HTML is 784 KB (homepage 852 KB); competitors' median is 156 KB. HTML is sent `no-store` and never cached. Mobile LCP was 5.2–8.7 s on 5 of 6 pages tested. Google Tag Manager is 522 KB. The 1,200×1,200 author photos (612 KB and 754 KB) load at full size on every post. The homepage logs React hydration error `#418`.

IMPACT

Slow loading on mobile across every page type tested.

FIX

Edge caching, image optimisation, a leaner tag load, and the hydration fix.

MEDIUM

Sitemap, robots and templates

EVIDENCE

435 of 455 sitemap `lastmod` values share one date. The sitemap lists a `noindex` page and the 5 canonicalised pages. The 404 page outputs both `noindex` and `index, follow`. `/worldwide-moving` is titled "worldwide-moving". `track.` and `pay.` are open to crawlers with generic titles.

FIX

Real `lastmod` dates, a clean sitemap, a single-robots 404 page, corrected titles, `noindex` on app subdomains.

MEDIUM

Trust and local signals

EVIDENCE	Office labels don't match their addresses: "Atlanta" is in McDonough, "Los Angeles" in Santa Ana, "San Francisco" in Fremont. Pages state 15, 18 and 20 years in business. The Trustpilot rating (4.2 from 520 reviews) isn't shown on the site. 2% of posts cite an official source.
FIX	Consistent office names and addresses (NAP) everywhere; one years-in-business figure; a live review widget; citations to customs authorities.

How SFL compares

MEASURE	SFL	COMPETITOR RANGE
Median HTML size	784 KB	58–640 KB (median 156 KB)
Sampled pages with structured data	35%	88–100% on 9 of 11 sites
Blog posts with Article markup	0%	89–100% (Easyship, Meest, Shippo, WCS, Qwintry)
Blog posts mentioning 2026	6%	46–100%
Blog figures per 1,000 words	8.1	10.7–55.8
Sitemap entries with the same lastmod	96%	4–57% on 10 of 11 sites

What to expect, and when

SEO results follow a sequence: fixes go live, Google re-crawls and re-indexes the changed pages, then rankings move. Here is the realistic pace for SFL.

MONTHS 1-3 · INITIAL TERM	MONTHS 4-6	MONTHS 7-12
Foundation Technical fixes shipped, redirects live, structured data in every template, first content and backlinks. Search Console shows the fixed pages being indexed. Ranking movement is small at this stage.	Traction New and rewritten pages indexed and ranking. First movement on long-tail country and cost queries. The car shipping hub and first moving pages are live.	Compounding Content, links and AI citations build on each other. Growth on the 23 main keywords and wider visibility beyond India.

MILESTONE	TARGET
Five service pages fixed and live	Weeks 2-3
Redirect map approved; redirects and link repairs live	Weeks 3-5
Blog pagination, topic hubs and structured data live	Weeks 6-8
Speed fixes live; mobile speed re-tested	Weeks 8-12
International car shipping hub live	Month 3
Fixed pages confirmed indexed in Search Console	Months 2-4
Moving pages for Dubai, the UK and Canada live	Months 4-5
First measurable ranking movement on target keywords	Months 3-6

Dates for code changes depend on SFL approving and deploying our pull requests within 5 business days.

What we will provide

Technical SEO, implemented

Our team writes and tests every code change and submits it to SFL's repository for approval. The work covers:

- canonical and hreflang fixes;
- redirects and broken-link repair;
- the sitemap, robots.txt and 404 page;
- crawlable blog pagination and topic hubs;
- caching headers, image optimisation and the hydration fix;
- a re-crawl after every release to confirm it worked.

Content: 12–15 pieces a month

A monthly mix of new pages, rewrites and blog posts, each built around a mapped keyword and SFL's real rates:

- **New pages:** the international car shipping hub and routes, moving pages, and Sri Lanka and Bangladesh.
- **Rewrites:** country pages, starting with Nigeria, the Philippines, Pakistan, the UK, Canada, Ghana and the UAE.
- **Blog posts:** the question bank (cost, transit time, prohibited items, moving guides) and the 10 posts that currently don't answer their own title.

Foundational backlinks

- **Link reclamation:** backlinks pointing to the 144 retired URLs recovered through redirects, plus unlinked brand mentions in press and award listings converted to links.
- **Citations:** consistent business profiles for the 5 offices across Google Business Profile, Bing Places, Apple Business Connect, BBB, Yelp and logistics directories.
- **Associations:** member-profile links from the bodies whose badges SFL shows (IAM, FIDI, ARA, IMA).
- **Community outreach:** Indian, Nigerian, Filipino and Pakistani diaspora organisations, and expat and relocation publications.
- **Data asset:** a quarterly "shipping cost index" built from SFL's own rates, pitched to journalists and bloggers.

AEO: answer engine optimisation

Getting SFL cited in Google AI Overviews, ChatGPT, Perplexity and Gemini:

- answer-first page structure: a direct answer with a number in the first 60 words;
 - FAQ and comparison tables built from the question bank;
 - consistent entity data: Organization `sameAs` , office addresses, authors with credentials;
 - a rebuilt `llms.txt` and a review of AI crawler access in `robots.txt` ;
 - citations to customs authorities on rule-based content;
 - monthly tracking of SFL's presence in AI answers for 30 target prompts.
-

Structured data

Article, author, breadcrumb, organization, website and office-location markup, built into the templates so every new page inherits it.

Keyword targeting

A keyword-to-page map covering the 3,355-keyword universe, one main keyword per page, and a 330-question bank for FAQs and blog posts.

Tracking and reporting

Weekly rank tracking on the 23 main keywords. A monthly report on work shipped, rankings, organic traffic, links gained and AI citations, with a review call.

One named strategist

A single senior contact for the whole engagement, reachable by email between monthly calls.

The REIGN framework, applied to SFL

R	E	I	G	N
RECON Complete	ENGINEER Weeks 1–2	IMPLEMENT Month 1 onward	GOVERN Ongoing	DOMINATE Month 6+
Full crawl, competitor benchmark, keyword universe and search-result analysis.	A 90-day plan: technical fixes first, then content clusters, links and AEO.	Code changes, content, links and markup, built and shipped by our team.	Rank and AI-citation tracking, monthly reporting, re-crawl after each release.	New routes, moving markets and wider AI search visibility.

Initial term in detail, then the year

WHEN	TECHNICAL AND AEO	CONTENT (12–15 A MONTH)	BACKLINKS
Month 1	Access and tracking set up. Canonical and hreflang fixes. Redirect map and redirects. Link repairs. Sitemap, robots.txt and 404 page.	10 post fixes (transit time and 9 cost posts); Nigeria and Philippines rewrites; 1–3 blog posts	Backlink audit of retired URLs; link reclamation; office citations (NAP) cleaned up
Month 2	Blog pagination and topic hubs; structured data across templates; <code>llms.txt</code> rebuilt; entity data completed	Pakistan, UK and Canada rewrites; 9–12 blog posts from the question bank	Directory and association profiles; unlinked-mention outreach

WHEN	TECHNICAL AND AEO	CONTENT (12–15 A MONTH)	BACKLINKS
Month 3	Speed: caching, images, hydration fix; Tag Manager plan; AI-citation baseline for 30 prompts	International car shipping hub; Ghana and UAE rewrites; 9–12 blog posts	Diaspora and expat outreach begins; first cost-index data asset
Months 4–6	Locale clean-up and hreflang; office markup; speed re-test	Moving pages for Dubai, the UK and Canada; car routes for Nigeria and the UAE; Sri Lanka and Bangladesh pages; blog cadence continues	Ongoing outreach; quarterly data asset
Months 7–12	Quarterly re-audit; AEO refinement from citation data	Remaining templated country pages rewritten; freight-forwarding and 5 office pages; rate tables refreshed quarterly	Scaled outreach on the best-performing channels

One monthly fee, everything above included

MONTHLY RETAINER

\$1,899 USD / month

Billed monthly in advance. 3-month initial term, then month to month with 30 days' notice.

- Technical SEO, implemented in code
- 12–15 content pieces a month: new pages, rewrites and blog posts
- Foundational backlinks: reclamation, citations, associations, outreach
- AEO for Google AI Overviews, ChatGPT, Perplexity and Gemini
- Structured data across all templates
- Keyword map and question bank
- Weekly rank tracking, monthly report and review call
- One named senior strategist

Not included

- Paid link placements and large digital PR campaigns (quoted separately on request)
- Paid search and social advertising
- Changes made inside third-party accounts (Tag Manager, Cloudflare, Google Business Profile). We give step-by-step instructions; SFL's account owners apply them.

What we need from SFL

- Access to Google Search Console and Google Analytics
- Access to the website code repository and a staging environment, plus a contact who approves and deploys our changes within 5 business days
- Current rates, transit times and customer examples for the pages we write, and a staff member to check facts before publishing
- Owner access, or a manager invitation, for the 5 Google Business Profiles

Getting started

1. **Sign this proposal.** We hold a kickoff call within 3 business days.
2. **Grant access** to Search Console, Analytics, the code repository and the Business Profiles.
3. **Weeks 1–2:** the 90-day plan is signed off, and the canonical fixes are submitted for approval.
4. **Weeks 3–5:** redirects and link repairs go live, and the first content is published.

We don't guarantee specific ranking positions; no search engine allows anyone to. We commit to the scope, the timeline and a monthly report you can check against both.
