# Qubik AI & Automation · Google Search Ads

A 30-day test to win business process automation and AI implementation leads across Australia

| ~A$1,400 | 150–180 | 5–14 | A$100–280 |
|---|---|---|---|
| monthly ad spend (~A$46/day) | clicks a month | leads a month | per lead |

*Expected figures for the first month, from Google's own forecast. Estimates until real data replaces them in week 2.*

## Who we reach

Australian businesses actively searching for help, not browsing: "business process automation", "automation consultant", "workflow automation services", "AI implementation consultants", "AI agent development", "AI readiness assessment". About 990 searches a month (Google Keyword Planner, November 2026). Each ad leads to a page that matches the search, with a free 30-minute call as the next step.

## Expected numbers

| | Lower case | Expected (Google forecast) | Basis |
|---|---|---|---|
| **Clicks a month** | 40–70 | 150–180 | Planner forecast: 181 clicks at ~A$48/day |
| **Average cost per click** | A$14–18 | ~A$8 | Forecast and Planner bid ranges |
| **Leads a month (3–8% of clicks)** | 1–6 | 5–14 | Landing page conversion, my estimate |
| **Qualified leads (40–60% of leads)** | 1–3 | 2–8 | Right size, decision-maker, real need |
| **Cost per qualified lead** | A$300–1,400 | A$175–700 | Firmed up from real data after week 2 |

*The lower case applies if Google shows the ads only on the exact phrases; the forecast includes close variants of each phrase. The forecast was pulled for December, so it will be re-run for a normal month before launch.*

### What I will do

- Set up tracking on qubik.com.au (it has none today): Tag Manager, GA4, Google Ads conversions, enhanced conversions.
- Build two landing pages (process automation; AI implementation) on the existing site, hidden from the menu, with a lead form that records which ad and keyword brought each lead.
- Build the campaign: 26 high-intent keywords in 4 ad groups, 138 negative keywords to block software shoppers, job seekers and students, ads and extensions.
- Optimise twice a week: search terms, negatives, bids, ad copy.
- Send a weekly report (spend, leads, qualified leads, cost per qualified lead, meetings) and a day-30 recommendation: scale, adjust or stop.

### What I need from Qubik

- A Google Ads account owned by Qubik, in AUD and Brisbane time, with Qubik's billing. I work in it as a manager.
- Ad budget approved: about A$1,400 a month, paid directly to Google.
- WordPress admin access, a current backup, and approval to add Tag Manager and one form plugin (Fluent Forms).
- Sign-off on the offer and what the page may say: free 30-minute call, assessment price, Xero partner wording, Dominic's photo and testimonial.
- A named person who calls new leads within 15 minutes in business hours, and tells me weekly which leads were qualified.
- Privacy policy updated to cover analytics and ad tracking.

## Timeline and decision

| | |
|---|---|
| **Week 1** | Access, tracking, landing pages built and tested |
| **Week 2** | Campaign live; first search-term clean-up after 3–4 days |
| **Weeks 3–4** | Optimise; first qualified leads and meetings |
| **Day 30** | Review with Qubik. Scale if a qualified lead costs A$750 or less; stop if it is above A$1,000 after clean-up |
