SEO / AEO ANALYSIS · US · OCTOBER 2026

Trillet: SEO / AEO analysis for "voice infrastructure", "voice API" and "OEM voice API"

Market: United States, English · **Data pulled:** October 28, 2026 · **Source:** DataForSEO (Labs, SERP, On-Page, Backlinks, AI Optimization) · **Spend:** $2.01 **Product fit:** *unconfirmed*. Where this report cites Trillet pages, it reports what the pages say, not what the product does.

Confidence labels: Verified = read directly from the data or page · Inferred = my reading of the data · Unverified = needs a source or sign-off.

1. The short version

1. **None of the three keywords is a traffic play.** US demand is small: "voice API" gets 260 searches a month, "voice infrastructure" 20, and "OEM voice API" has no measurable volume Verified. "Voice API" carries a $56.82 CPC Verified, so the few people who search it are high-value buyers. The value here is lead quality and AI-answer visibility, not volume Inferred.
2. **Trillet is invisible on the generic terms in both Google and AI answers.** It ranks #70 for "voice API" and isn't in the top 20 for any of the 15 queries I pulled Verified. It's mentioned in **0 of 42** AI answers to generic voice-API / infrastructure questions Verified.
3. **Trillet already wins the OEM / white-label angle in AI search.** It's mentioned in **9 of 18** AI answers to OEM, white-label and reseller questions Verified. Perplexity cites `trillet.ai/partners/oem` in both runs, and Gemini names Trillet as an "OEM tier" vendor Verified. Google has no clear answer for this intent yet Inferred from the mismatched results page. **This is the opening.**
4. **"Voice API" belongs to the carrier and CPaaS players** (communications platforms that sell calling and messaging APIs): Twilio, Vonage, Telnyx, Flowroute, Bandwidth. Their pages hold 79–139 referring domains, against 0 for Trillet's best page Verified, and their domain rank is 48–77 against Trillet's 33 Verified. I wouldn't chase the head term. I'd go after the AI-agent variant of it ("voice agent API", "voice AI API"), where the results are mixed and difficulty is lower.
5. **The adjacent white-label cluster has the volume the three seeds lack.** "White label AI platform" gets 1,600 searches a month at difficulty 0, and Trillet sits at #41 with a chatbot post Verified. "White label AI voice agent" gets 110 a month at a $36 CPC, and Trillet doesn't rank Verified.

Recommended order: (1) make `/partners/oem` the canonical "OEM / white-label voice AI API" page. (2) Build one "voice agent API" developer page off `docs.trillet.ai`. (3) Publish a definitional "voice infrastructure for AI agents" explainer, aimed at getting cited by AI engines rather than at clicks. (4) Earn inclusion in the third-party listicles the AI engines cite.

2. Method and spend

Step	What was pulled	Actual cost
1. Keyword universe	Overview for 60 seed/adjacent terms, phrase suggestions for "voice api" (300) and "voice infrastructure", related keywords. Cleaned to **313 terms** in 10 clusters	$0.157

Step	What was pulled	Actual cost
2. Google results	15 queries, top 10 desktop (top 20 + mobile for the 3 seeds), with AI Overview and People Also Ask	$0.025
3. Competitors	Competing domains across 92 cluster keywords; Trillet's ranked keywords (filtered); traffic estimates for 20 domains	$0.043
4. Page crawl	23 pages (top-ranking competitor pages + Trillet pages)	$0.003
4b. Backlinks	Domain rank for 20 domains; referring domains for 17 ranking pages	$0.049
5. AI answers	10 buyer questions × ChatGPT 2 runs, Perplexity 2 runs, Gemini 1 run, Claude 1 run = **60 answers**	$1.705
ChatGPT scraper (not returned)	21 tasks queued; none returned in ~45 min, so I fell back to the API	$0.025
Total		**$2.01** (balance $49.87 → $47.87)

Limits to keep in mind - **ChatGPT answers came from the API, not the consumer ChatGPT interface.** The scraper tasks never returned, so I used GPT-5.4-mini with web search; one answer, P1 run 1, used GPT-5.5. Answers in the consumer app can differ Verified that this was the method. - **The AI-answer sample is directional.** With 1–2 runs per engine per question, answers vary from run to run, so treat percentages as a baseline to re-measure, not a fixed share. - **Gemini's citations come back as Google redirect links**, so the cited domains couldn't be resolved. The brand mentions in its answers are still valid. - **Low volumes are floors.** DataForSEO reports small numbers in 10-search buckets, and "no data" means below the reporting threshold, not literally zero. - **The "voice call api" results page returned google.com redirect URLs** for its organic results, so I used the page titles to identify who ranks.

3. Keyword findings

3.1 Seeds Verified, DataForSEO Labs, US

Keyword	US vol/mo	Difficulty	CPC	Intent	Search features	Trillet
voice api	260 (+260 for "api voice", same results)	39	$56.82	informational	AI Overview, PAA	#70 (`/blogs/voice-ai-platform-api-comparison-for-developers`)
voice infrastructure	20	21	n/a	informational	featured snippet, AI Overview, PAA, video	not top 100
oem voice api	no data	n/a	n/a	n/a	AI Overview	not top 20

3.2 Cluster view (313 cleaned terms)

Cluster	Terms	US vol/mo	Median difficulty	Read
OEM / white-label	18	2,530	0	**Best fit plus volume.** Led by "white label ai platform" (1,600, Trillet #41)
Calling / telephony API	19	1,910	15	CPaaS territory. "cpaas" (1,000, $136 CPC) is a telecom buyer, not Trillet's Inferred
Competitor alternatives	4	1,420	0	"twilio alternative" 880, "vapi alternative" 480; both difficulty 0
Voice API (core)	44	1,150	49	Head term plus a long tail of dev-niche variants

Cluster	Terms	US vol/mo	Median difficulty	Read
Voice AI platform / build	3	930	41	"voice ai platform" 880 at a **$85.68 CPC**
Voice AI / agent API	23	460	40	"voice agent api" 50 (difficulty 0), "voice ai api" 50, "conversational ai api" 50 (difficulty 0)
Voice infrastructure	4	50	21	Almost no search demand
Speech (STT/TTS) API	72	28,600	40	Large, but a different product (speech-to-text / text-to-speech engines). Out of scope
Vendor-branded / competitor brand	126	132,520	n/a	Navigational (e.g. "twilio voice api", "retell ai"). Not targets

Zero-volume terms worth noting, because AI search covers them even if Google doesn't: "white label voice api", "voice ai infrastructure", "voice agent infrastructure", "embedded voice ai", "sip trunking api", "realtime voice api", "voice api providers" Verified: no data.

What this means Inferred**.** The way the market searches doesn't match the way the industry talks. Vendors say "voice infrastructure" and "OEM", but buyers search "white label AI...", "voice agent API" and "[competitor] alternative". I'd use the industry terms as the *positioning language* on pages and in AI answers, and the searched terms as the *targeting language* in titles, H1s and URLs.

4. Google results-page findings Verified, SERP snapshot Oct 28 2026

AI Overviews appear on all 15 queries. Trillet isn't cited in any of them.

Query	Who wins	Page types (top 10)	AI Overview cites
voice api	Twilio, Vonage, Telnyx, Orange, GetStream, Flowroute, OpenAI, Bandwidth, RingCentral, MDN	5 docs, 3 product, 2 editorial	Twilio, Vonage, Telnyx (+ Orange, Microsoft, GetStream, Flowroute, Bandwidth, OpenAI on mobile)
voice infrastructure	Aircall (VoIP), Forbes, Sangoma, Tiatra, TelcoBridges, dev.to, Deepgram, DRING, Voicing AI	5 editorial, 3 product, 2 forum	YouTube, Aircall (mobile: Sangoma, Tiatra, TelcoBridges, Reddit, Genesys)
oem voice api	Reddit, AttractGroup, ZegoCloud, RevenueBase, eesel, plus *automotive OEM* results	6 editorial, 3 product	Reddit, AttractGroup, VideoSDK (mobile: Vapi, Retell, Cartesia, VoiceAIWrapper...)
white label voice api	Crescendo, Retell partner page, My AI Front Desk, OpenMic, Reddit, YouTube, Voicerr	listicles, partner pages, video	YouTube, Retell
white label ai voice agent	Crescendo, Reddit, YouTube, Blck Alpaca, Autocalls, Echo, My AI Front Desk, Synthflow	listicles + product	Reddit, Autocalls, byVoice
voice ai api / voice agent api	voice.ai, Vapi, Reddit, xAI, OpenAI, AssemblyAI, Cekura / Vonage, Cekura, OpenAI, Deepgram, Retell	product + "best X APIs" listicles	AI Overview shown, no citations returned
vapi alternative	Venture Harbour, Reddit, **Insighto.ai (#3)**, Dograh, YouTube	comparisons	YouTube, Venture Harbour, CloudTalk
twilio alternative	TechnologyAdvice, Reddit, Voiso, Medium, Bluereacher	listicles	Reddit, Plivo, Telnyx

Authority gap Verified, Backlinks API

Page	Referring domains	Word count
twilio.com/en-us/voice (#1 voice api)	139	2,797
flowroute.com "What is a voice API" (#6)	131	2,649
telnyx.com/products/voice-api (#3)	79	1,525
developer.vonage.com voice overview (#2)	19	194
getstream.io glossary (#5)	0	1,732
Voice-infrastructure top pages (Aircall, Sangoma, Tiatra, dev.to)	0–3	690–2,425
White-label top pages (Crescendo, Retell partner, Blck Alpaca)	0–4	480–6,260
Trillet `/blogs/voice-ai-platform-api-comparison-for-developers`	**0**	3,953
Trillet `/whitelabel`	**1**	2,823

Domain rank (0–100 scale): Trillet **33** · Twilio 77 · Vonage 69 · Bandwidth/Aircall 60 · Sangoma/Deepgram 59 · Vapi 58 · Telnyx/Retell 56 · Synthflow 53 · Plivo 52 · My AI Front Desk/Crescendo 50 · Flowroute 48 · Insighto 41 · Autocalls 38.

What this means Inferred - **"Voice API":** the top pages win on domain authority plus documentation, not on content quality. GetStream ranks #5 with zero links to the page, but on a domain rank of 54. At domain rank 33, Trillet won't break into this top 10 on content alone. - **"Voice infrastructure" and "OEM / white-label":** the top pages have almost no links (0–4 referring domains). That's beatable with a well-targeted page and internal links. - **The "oem voice api" results are confused** (automotive OEM pages, generic real-time API listicles). That means Google has no page that fits the intent. A page that answers it squarely has a real shot, despite the tiny volume.

5. AI-search (AEO / GEO) findings Verified, 60 answers, Oct 28 2026

5.1 Brand share across all 60 answers

Brand	Mentioned in	Brand	Mentioned in
Vapi	83%	Synthflow	25%
Retell	80%	LiveKit	22%
Twilio	55%	AssemblyAI	20%
OpenAI	53%	VoiceAIWrapper	20%
ElevenLabs	52%	Cartesia	17%
Deepgram	47%	**Trillet**	**15%**
Telnyx	42%	Autocalls	13%
Bland	33%	Plivo / Pipecat	12%

5.2 Where Trillet shows up, by question (6 answers each)

#	Question	Trillet	Brands that dominate
P1	What is voice infrastructure for AI voice agents, and which companies provide it?	0/6	Retell, Twilio, Vapi, AssemblyAI, Deepgram
P2	Best voice APIs for building AI voice agents in 2026?	0/6	Deepgram, ElevenLabs, OpenAI, Vapi

#	Question	Trillet	Brands that dominate
P3	Which voice API to add AI phone calling to my SaaS?	0/6	Twilio, Retell, Vapi, Telnyx
P4	**Is there an OEM or white-label voice AI API I can embed under my brand?**	**3/6**	Deepgram, OpenAI, Vapi, Voicerr, VoiceAIWrapper, **Trillet**
P5	**Best white-label voice AI platforms for agencies?**	**5/6**	Retell, Synthflow, Autocalls, **Trillet**, Stammer
P6	Twilio vs Telnyx vs Vapi vs Retell for an AI phone agent?	0/6	(named brands)
P7	Voice AI platforms with an API and HIPAA compliance for healthcare?	**0/6**	Twilio, Retell, Vapi, Bland
P8	Cheapest voice API for AI phone agents at scale?	0/6	Deepgram, Retell, Vapi, Bland
P9	What is a programmable voice API and how does it work?	0/6	Plivo, Telnyx, Twilio, Vonage
P10	**Which voice AI platform lets me resell agents to clients via API?**	**1/6**	Retell, Vapi, VoiceAIWrapper, Autocalls

What the engines say about Trillet Verified, quoted from the answers - Perplexity, P4 (both runs): *"Trillet: partner-focused OEM integrations with voice and messaging, APIs, webhooks, and in-call access; availability is scoped through an approved partnership rather than self-serve signup."* Cites `trillet.ai/partners/oem`. - Gemini, P4: lists *"Trillet AI / Monobot CX (OEM Tier)... embed their conversational engine, channel integrations and compliance framework directly into your product."* - Perplexity, P5: puts Trillet first on its agency shortlist and quotes a "$299/month Agency plan" figure. Unverified That pricing hasn't been checked against the source-of-truth register. - Claude, P5: *"most of these comparisons are published by the vendors themselves (Trillet, Autocalls, Retell...), so each tends to rank itself first."* AI engines are starting to discount vendor-written listicles.

Most-cited domains (all engines except Gemini): retellai.com 16 · telnyx.com 13 · deepgram.com 11 · twilio.com 11 · developers.openai.com 10 · docs.vapi.ai 8 · autocalls.ai 8 · bland.ai 8 · **trillet.ai 6** · voiceaiwrapper.com 6 · dasha.ai 6 · assemblyai.com 6. Third-party listicles also recur: frejun, ringlyn, cloudtalk, forasoft, clawcall, wotnot, cekura, producthunt.

What this means Inferred 1. **The AI engines file Trillet under "white-label / OEM for agencies and SaaS", not "voice API / infrastructure".** That's consistent with the site's own content. Strengthening that position is cheaper than fighting for the generic category. 2. **The HIPAA question (P7) is the clearest miss.** Compliance is one of Trillet's main differentiators, yet it got 0 of 6 mentions while Bland, Retell, Vapi and Twilio got cited. This matches the earlier audit finding that compliance queries get impressions but no clicks. Fixing it needs compliance content that has been through legal sign-off. 3. **Developer docs get cited heavily.** docs.vapi.ai, developers.openai.com and Retell's docs and glossary account for much of the ChatGPT and Claude citations. `docs.trillet.ai` exists ("a powerful REST API...") but wasn't cited once. 4. **Third-party lists are the lever off the site.** The engines lean on independent "best voice AI API" lists. Getting Trillet included in those lists does more for AI visibility than another post on Trillet's own blog.

6. Trillet's current assets Verified, crawled Oct 28 2026

URL	Title / H1	Relevance
`/partners/oem`	"OEM Conversation AI for Software Platforms" / "Build conversation AI into your product." 963 words. H3s include *APIs & webhooks*, *Carrier-level telephony*, *Separate customer workspaces*, *Controls for regulated use cases*	**The natural page for "OEM voice API".** Its title and H1 use "conversation AI" and never say "voice API", "white-label" or "embed"
`/partners`	"Partner Program: Bring Trillet Solutions to Market"	Hub covering reseller, referral and OEM partnerships

URL	Title / H1	Relevance
`docs.trillet.ai`	"Trillet AI provides a powerful REST API to create human-like voice and messaging experiences at scale." 245 words; canonical points to `/documentation/introduction`	The natural base for a "voice agent API" page. Thin landing page
`/blogs/voice-ai-platform-api-comparison-for-developers`	"Voice AI Platform API Comparison for Developers in 2026". 3,953 words, includes "Trillet API: best for agency automation" and "MCP Server Support"	Ranks #70 for "voice API" and #63 for "ai voice api"; 0 referring domains
`/whitelabel`	"White-Label Voice AI Platform for Agencies"	1 referring domain; ranks #68 for "white label call center"
`/blogs/top-10-white-label-voice-ai-platforms-for-agencies-2026`	Vendor top-10 list	#13 for "white label voice ai"; cited by Perplexity and Claude
`/api`, `/developers`	**404**	No developer landing page on the main domain

7. Recommendations

The register gate from the earlier plan applies to all of these: every product, pricing and compliance claim goes claim → source → approved owner, and compliance claims need legal sign-off. Product fit is unconfirmed, so **R1 and R2 start with a fit check.**

R1. Make `/partners/oem` the OEM / white-label voice API page. Priority: High

- **Asset:** `trillet.ai/partners/oem` (existing).
- **Evidence:** Perplexity already cites it on P4. "oem voice api" has no page in Google that fits the intent. Pages ranking for "white label voice api" have 0–4 referring domains. Trillet is mentioned in 9/18 OEM / white-label AI answers.
- **Change:**
- Retitle to the searched language while keeping the positioning. For example: *"OEM & White-Label Voice AI API for Software Platforms | Trillet"*, with an H1 that says "embed voice AI agents in your product".
- Add an answer-first paragraph defining OEM vs white-label vs reseller, plus a short "what's in the API" block (endpoints, webhooks, telephony, workspaces) that links into docs.
- Add an FAQ (who it's for, how access works, where the data lives, compliance scope). Mark up Organization and Product schema for machine-readability, not for rich results.
- **Owner:** [Product Marketing] for the fit check and claims · [Content/SEO] for the page · [Compliance/Legal] for the regulated-use and data-residency wording.
- **Depends on:** confirming that Trillet sells an embeddable API under OEM terms, and what self-serve vs partner-only access looks like.
- **Success metric:** indexed and ranking top 10 for "oem voice api", "white label voice api" and "white label ai voice agent"; Trillet named in ≥4/6 runs of P4 and ≥2/6 of P10 at re-measure.
- **Window:** 30 days to ship, 60–90 days to measure.
- **Failure condition:** not top 20 for "white label ai voice agent" after 90 days. Then the page needs links (R4), not more copy.

R2. Build one "voice agent API" developer page. Priority: **High (if fit is confirmed)**

- **Asset:** a new `trillet.ai/voice-agent-api` page, or a strengthened `docs.trillet.ai` introduction. `/api` and `/developers` currently 404.
- **Evidence:**
- "voice agent api" gets 50/mo at difficulty 0 and a $40.67 CPC; "voice ai api" 50/mo at difficulty 39; "conversational ai api" 50/mo at difficulty 0.
- Those results pages mix product pages and "best voice AI APIs" listicles, not carrier docs.
- Developer docs are the most-cited source type in ChatGPT and Claude answers.
- **Change:**
- Write a product page for builders: what you can do through the API (create agents, place calls, webhooks, MCP), a code sample, rate and limit notes, and a link to the docs.
- Expand the docs introduction beyond 245 words.
- Link the existing API comparison post to this page instead of having the post try to rank for "voice API" itself.
- **Owner:** [Product Marketing] + [Dev] for the code samples · [Content/SEO].
- **Success metric:** top 10 for "voice agent api" and "voice ai api"; Trillet mentioned in ≥1/6 runs of P2 and P3.
- **Window:** 30–60 days.
- **Failure condition:** if the fit check says the API is agency-automation only, not a builder API, drop this item and fold the wording into R1.

R3. Publish a "voice infrastructure for AI agents" explainer. Priority: **Medium (AEO, not traffic)**

- **Evidence:** only 20 searches a month, but the top pages have 0–3 referring domains and the results show a featured snippet and PAA. P1 AI answers mention Retell, Twilio, Vapi and Deepgram, and Trillet 0/6.
- **Change:**
- Write one definitional pillar page. Lead with a 40–60-word definition that can be lifted straight into an AI answer.
- Lay out the stack (telephony/SIP → real-time transport → STT → LLM → TTS → orchestration → compliance and monitoring), with a comparison of native vs wrapper architecture. Trillet's existing "native vs wrapper" story fits here.
- Link to R1 and R2.
- **Owner:** [Content/SEO].
- **Success metric:** wins the featured snippet or a top-3 spot for "voice infrastructure"; Trillet mentioned in ≥1/6 runs of P1.
- **Window:** 30 days to ship.
- **Failure condition:** no AI citation after 90 days. Then don't expand the infrastructure cluster.

R4. Earn inclusion in the third-party lists the AI engines cite. Priority: **High (off-page)**

- **Evidence:** the AI engines repeatedly cite independent lists (Cekura "best voice AI APIs", frejun, ringlyn, forasoft, cloudtalk, wotnot, Product Hunt), and Claude explicitly discounts vendor-written comparisons.
- **Change:** pitch Trillet's OEM / white-label angle to the authors of the cited "best voice AI API / white-label voice AI" lists, launch on Product Hunt, and keep marketplace profiles current (workstream F of the existing plan). No paid or incentivized placements.
- **Owner:** [Product Marketing].
- **Success metric:** ≥3 third-party lists include Trillet; referring domains to `/partners/oem` and `/whitelabel` ≥5 each.
- **Window:** 30–60 days.

R5. Close the HIPAA gap in AI answers. Priority: **Medium (gated)**

- **Evidence:** P7 (API plus HIPAA for healthcare) gave Trillet 0/6, while Bland, Twilio and ElevenLabs were cited.
- **Change:** a compliance-scoped "HIPAA-ready voice AI API" section on R1 and R2, plus a citable compliance page. This ties into the compliance pillar in workstream E of the existing plan.
- **Owner:** [Compliance/Legal] (hard gate) · [Content/SEO].
- **Failure condition:** no legal sign-off means nothing ships.

R6. Comparison pages with high CPC and zero difficulty. Priority: **Medium (consolidate first)**

- **Evidence:** "twilio alternative" 880/mo, difficulty 0, $47.67 CPC; "vapi alternative" 480/mo, difficulty 0, $48.82 CPC. Insighto.ai ranks #3 for "vapi alternative" with the same play.
- **Change:** in line with the existing "consolidate before expanding" decision, merge the existing Vapi comparison posts (three duplicates in the earlier audit) into one canonical "Vapi alternative" page before writing anything new. Then evaluate "Twilio alternative for AI voice agents" as the one new comparison.
- **Owner:** [Content/SEO].

Not recommended

- **Chasing "voice API" or "cpaas" as head terms.** The intent is carrier/CPaaS buyers (Inferred), the gap in authority is 79–139 referring domains, and domain rank is 33 vs 56–77.
- **The STT/TTS cluster** (28,600/mo). It's a different product category.
- **Separate pages for every zero-volume variant.** "White label voice api", "embedded voice ai" and similar belong as sections and FAQs on R1.

---

8. Opportunity sizing (not a forecast)

If R1–R3 reach positions 3–5 on their target terms, a typical 5–10% CTR at those positions gives roughly **100–200 clicks/month** from about 2,000 searches/month: "white label ai platform" (1,600), the white-label voice terms (~250) and the voice-agent API terms (~150). If R6 is pursued, the two "alternative" terms add 1,360 searches/month, or about 70–135 more clicks. "Voice api" is excluded because page 2 at best earns almost nothing. Low volume, but at $20–85 CPCs Verified this is buyer traffic Inferred. The larger upside is AI-answer share on P1–P4, P7 and P10, which these volumes don't capture.

---

9. Re-measurement baseline

KPI	Baseline (Oct 28 2026)	Target	Source
Trillet rank: "voice api"	#70	top 20	DataForSEO SERP
Trillet rank: "white label ai platform"	#41	top 10	DataForSEO SERP
Trillet rank: "white label ai voice agent" / "oem voice api" / "voice agent api"	not ranking	top 10	DataForSEO SERP
AI Overview citations across the 15 queries	0	≥3	DataForSEO SERP
AI answer share, generic questions (P1–P3, P6–P9)	0/42	≥5/42	DataForSEO AI Optimization, same 10 questions
AI answer share, OEM / white-label questions (P4, P5, P10)	9/18	≥12/18	same

KPI	Baseline (Oct 28 2026)	Target	Source
Referring domains: `/partners/oem` · `/whitelabel`	not pulled · 1	≥5 each	Backlinks API

Re-running the same 10 questions and 15 queries costs about $2 at current prices.
